Typographic Conventions

name; <sup>Fu</sup> name; <sup>M</sup> name; <sup>sO</sup> name; <sup>gF</sup> name; <sup>var</sup> *name*; <sup>co</sup> name	▷ Symbol defined in Common Lisp; esp. function, macro, special operator, generic function, variable, constant.
them	▷ Placeholder for actual code.
me	▷ Literal text.
[foo <sup>bar</sup> ]	▷ Either one <i>foo</i> or nothing; defaults to <i>bar</i> .
foo*; {foo}*	▷ Zero or more <i>foos</i> .
foo <sup>+</sup> ; {foo} <sup>+</sup>	▷ One or more <i>foos</i> .
foos	▷ English plural denotes a list argument.
{foo bar baz}; { <sup>foo</sup> bar <sup>bar</sup> baz}	▷ Either <i>foo</i> , or <i>bar</i> , or <i>baz</i> .
{ <sup>foo</sup> bar <sup>bar</sup> baz}	▷ Anything from none to each of <i>foo</i> , <i>bar</i> , and <i>baz</i> .
<sup>foo</sup>	▷ Argument <i>foo</i> is not evaluated.
<sup>bar</sup>	▷ Argument <i>bar</i> is possibly modified.
foo <sup>P</sup> *	▷ <i>foo</i> * is evaluated as in <sup>sO</sup> progn; see p. 19.
<u>foo; bar; baz</u> <sub>2 n</sub>	▷ Primary, secondary, and <i>n</i> th return value.
T; NIL	▷ <b>t</b> , or truth in general; and <b>nil</b> or <b>()</b> .

# 1 Numbers

## 1.1 Predicates

$(\overset{\text{Fu}}{=} \text{number}^+)$   
 $(\overset{\text{Fu}}{\neq} \text{number}^+)$       ▷ T if all *numbers*, or none, respectively, are equal in value.

$(\overset{\text{Fu}}{>} \text{number}^+)$   
 $(\overset{\text{Fu}}{>=} \text{number}^+)$   
 $(\overset{\text{Fu}}{<} \text{number}^+)$   
 $(\overset{\text{Fu}}{<=} \text{number}^+)$       ▷ Return T if *numbers* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

$(\overset{\text{Fu}}{\text{minusp}} a)$   
 $(\overset{\text{Fu}}{\text{zerop}} a)$       ▷ T if  $a < 0$ ,  $a = 0$ , or  $a > 0$ , respectively.  
 $(\overset{\text{Fu}}{\text{plusp}} a)$

$(\overset{\text{Fu}}{\text{evenp}} \text{integer})$       ▷ T if *integer* is even or odd, respectively.  
 $(\overset{\text{Fu}}{\text{oddp}} \text{integer})$

$(\overset{\text{Fu}}{\text{numberp}} \text{foo})$   
 $(\overset{\text{Fu}}{\text{realp}} \text{foo})$   
 $(\overset{\text{Fu}}{\text{rationalp}} \text{foo})$   
 $(\overset{\text{Fu}}{\text{floatp}} \text{foo})$       ▷ T if *foo* is of indicated type.  
 $(\overset{\text{Fu}}{\text{integerp}} \text{foo})$   
 $(\overset{\text{Fu}}{\text{complexp}} \text{foo})$   
 $(\overset{\text{Fu}}{\text{random-state-p}} \text{foo})$

## 1.2 Numeric Functions

$(\overset{\text{Fu}}{+} a_{\square}^*)$       ▷ Return  $\sum a$  or  $\prod a$ , respectively.  
 $(\overset{\text{Fu}}{*} a_{\square}^*)$

$(\overset{\text{Fu}}{-} a \ b^*)$   
 $(\overset{\text{Fu}}{/} a \ b^*)$       ▷ Return  $a - \sum b$  or  $a / \prod b$ , respectively. Without any *bs*, return  $-a$  or  $1/a$ , respectively.

$(\overset{\text{Fu}}{1+} a)$       ▷ Return  $a + 1$  or  $a - 1$ , respectively.  
 $(\overset{\text{Fu}}{1-} a)$

$(\overset{\text{M}}{\text{incf}} \text{place})$       ▷ Increment or decrement the value of *place* by *delta*. Return new value.  
 $(\overset{\text{M}}{\text{decf}} \text{place} \ [\text{delta}_{\square}])$

$(\overset{\text{Fu}}{\text{exp}} p)$       ▷ Return  $e^p$  or  $b^p$ , respectively.  
 $(\overset{\text{Fu}}{\text{expt}} b \ p)$

$(\overset{\text{Fu}}{\text{log}} a \ [b])$       ▷ Return  $\log_b a$  or, without *b*,  $\ln a$ .

$(\overset{\text{Fu}}{\text{sqr}} n)$       ▷  $\sqrt{n}$  in complex or natural numbers, respectively.  
 $(\overset{\text{Fu}}{\text{isqr}} n)$

$(\overset{\text{Fu}}{\text{lcm}} \text{integer}^*_{\square})$   
 $(\overset{\text{Fu}}{\text{gcd}} \text{integer}^*)$       ▷ Least common multiple or greatest common denominator, respectively, of *integers*. (**gcd**) returns 0.

$\overset{\text{Co}}{\text{pi}}$       ▷ **long-float** approximation of  $\pi$ , Ludolph's number.

$(\overset{\text{Fu}}{\text{sin}} a)$       ▷  $\sin a$ ,  $\cos a$ , or  $\tan a$ , respectively. (*a* in radians.)  
 $(\overset{\text{Fu}}{\text{cos}} a)$   
 $(\overset{\text{Fu}}{\text{tan}} a)$

$(\overset{\text{Fu}}{\text{asin}} a)$       ▷  $\arcsin a$  or  $\arccos a$ , respectively, in radians.  
 $(\overset{\text{Fu}}{\text{acos}} a)$

$(\overset{\text{Fu}}{\text{atan}} a \ [b_{\square}])$       ▷  $\arctan \frac{a}{b}$  in radians.

$(\overset{\text{Fu}}{\text{sinh}} a)$       ▷  $\sinh a$ ,  $\cosh a$ , or  $\tanh a$ , respectively.  
 $(\overset{\text{Fu}}{\text{cosh}} a)$   
 $(\overset{\text{Fu}}{\text{tanh}} a)$

$(\overset{\text{Fu}}{\text{asinh}} a)$   
 $(\overset{\text{Fu}}{\text{acosh}} a)$      $\triangleright$  asinh  $a$ , acosh  $a$ , or atanh  $a$ , respectively.  
 $(\overset{\text{Fu}}{\text{atanh}} a)$

$(\overset{\text{Fu}}{\text{cis}} a)$      $\triangleright$  Return  $e^{ia} = \cos a + i \sin a$ .

$(\overset{\text{Fu}}{\text{conjugate}} a)$      $\triangleright$  Return complex conjugate of  $a$ .

$(\overset{\text{Fu}}{\text{max}} \text{num}^+)$   
 $(\overset{\text{Fu}}{\text{min}} \text{num}^+)$      $\triangleright$  Greatest or least, respectively, of  $\text{nums}$ .

$\left\{ \begin{array}{l} \{\overset{\text{Fu}}{\text{round}}|\overset{\text{Fu}}{\text{fround}}\} \\ \{\overset{\text{Fu}}{\text{floor}}|\overset{\text{Fu}}{\text{ffloor}}\} \\ \{\overset{\text{Fu}}{\text{ceiling}}|\overset{\text{Fu}}{\text{fceiling}}\} \\ \{\overset{\text{Fu}}{\text{truncate}}|\overset{\text{Fu}}{\text{ftruncate}}\} \end{array} \right\} n [d_{\square}]$   
 $\triangleright$  Return as integer or float, respectively,  $n/d$  rounded, or rounded towards  $-\infty$ ,  $+\infty$ , or 0, respectively; and remain-  
der.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{mod}} \\ \overset{\text{Fu}}{\text{rem}} \end{array} \right\} n [d]$   
 $\triangleright$  Same as floor or truncate, respectively, but return re-  
mainder only.

$(\overset{\text{Fu}}{\text{random}} \text{limit} [\text{state}_{\text{var}} \text{random-state*}])$   
 $\triangleright$  Return non-negative random number less than  $\text{limit}$ , and of the same type.

$(\overset{\text{Fu}}{\text{make-random-state}} [\{ \text{state} [\text{NIL} | \text{T} | \text{new}] \}])$   
 $\triangleright$  Copy of random-state object  $\text{state}$  or of the current ran-  
 dom state; or a randomly initialized fresh random state.

$\text{var} \text{random-state*}$      $\triangleright$  Current random state.

$(\overset{\text{Fu}}{\text{float-sign}} \text{num-a} [ \text{num-b}_{\square} ]) \quad \triangleright \quad \text{num-b}$  with  $\text{num-a}$ 's sign.

$(\overset{\text{Fu}}{\text{signum}} n)$   
 $\triangleright$  Number of magnitude 1 representing sign or phase of  $n$ .

$(\overset{\text{Fu}}{\text{numerator}} \text{rational})$   
 $(\overset{\text{Fu}}{\text{denominator}} \text{rational})$   
 $\triangleright$  Numerator or denominator, respectively, of  $\text{rational}$ 's canonical form.

$(\overset{\text{Fu}}{\text{realpart}} \text{number})$   
 $(\overset{\text{Fu}}{\text{imagpart}} \text{number})$   
 $\triangleright$  Real part or imaginary part, respectively, of  $\text{number}$ .

$(\overset{\text{Fu}}{\text{complex}} \text{real} [ \text{imag}_{\square} ]) \quad \triangleright$  Make a complex number.

$(\overset{\text{Fu}}{\text{phase}} \text{number}) \quad \triangleright$  Angle of  $\text{number}$ 's polar representation.

$(\overset{\text{Fu}}{\text{abs}} n) \quad \triangleright$  Return  $|n|$ .

$(\overset{\text{Fu}}{\text{rational}} \text{real})$   
 $(\overset{\text{Fu}}{\text{rationalize}} \text{real})$   
 $\triangleright$  Convert  $\text{real}$  to rational. Assume complete/limited accu-  
 racy for  $\text{real}$ .

$(\overset{\text{Fu}}{\text{float}} \text{real} [ \text{prototype}_{\text{D.O.FO}} ]) \quad \triangleright$  Convert  $\text{real}$  into float with type of  $\text{prototype}$ .

### 1.3 Logic Functions

Negative integers are used in two's complement representation.

$(\overset{\text{Fu}}{\text{bool}} \text{operation} \text{int-a} \text{int-b})$   
 $\triangleright$  Return value of bitwise logical  $\text{operation}$ .  $\text{operations}$  are

$\overset{\text{co}}{\text{bool}} \text{e-1} \quad \triangleright \text{int-a}$ .  
 $\overset{\text{co}}{\text{bool}} \text{e-2} \quad \triangleright \text{int-b}$ .  
 $\overset{\text{co}}{\text{bool}} \text{e-c1} \quad \triangleright \neg \text{int-a}$ .  
 $\overset{\text{co}}{\text{bool}} \text{e-c2} \quad \triangleright \neg \text{int-b}$ .  
 $\overset{\text{co}}{\text{bool}} \text{e-set} \quad \triangleright$  All bits set.  
 $\overset{\text{co}}{\text{bool}} \text{e-clr} \quad \triangleright$  All bits zero.

**boole-eqv**  $\triangleright \underline{int-a \equiv int-b}$ .

**boole-and**  $\triangleright \underline{int-a \wedge int-b}$ .

**boole-andc1**  $\triangleright \underline{\neg int-a \wedge int-b}$ .

**boole-andc2**  $\triangleright \underline{int-a \wedge \neg int-b}$ .

**boole-nand**  $\triangleright \underline{\neg(int-a \wedge int-b)}$ .

**boole-ior**  $\triangleright \underline{int-a \vee int-b}$ .

**boole-orc1**  $\triangleright \underline{\neg int-a \vee int-b}$ .

**boole-orc2**  $\triangleright \underline{int-a \vee \neg int-b}$ .

**boole-xor**  $\triangleright \underline{\neg(int-a \equiv int-b)}$ .

**boole-nor**  $\triangleright \underline{\neg(int-a \vee int-b)}$ .

**(<sup>Fu</sup>lognot integer)**  $\triangleright \underline{\neg integer}$ .

**(<sup>Fu</sup>logeqv integer\*)**

**(<sup>Fu</sup>logand integer\*)**

$\triangleright$  Return value of exclusive-nored or anded integers, respectively. Without any *integer*, return -1.

**(<sup>Fu</sup>logandc1 int-a int-b)**  $\triangleright \underline{\neg int-a \wedge int-b}$ .

**(<sup>Fu</sup>logandc2 int-a int-b)**  $\triangleright \underline{int-a \wedge \neg int-b}$ .

**(<sup>Fu</sup>lognand int-a int-b)**  $\triangleright \underline{\neg(int-a \wedge int-b)}$ .

**(<sup>Fu</sup>logxor integer\*)**

**(<sup>Fu</sup>logior integer\*)**

$\triangleright$  Return value of exclusive-ored or ored *integers*, respectively. Without any *integer*, return 0.

**(<sup>Fu</sup>logorc1 int-a int-b)**  $\triangleright \underline{\neg int-a \vee int-b}$ .

**(<sup>Fu</sup>logorc2 int-a int-b)**  $\triangleright \underline{int-a \vee \neg int-b}$ .

**(<sup>Fu</sup>lognor int-a int-b)**  $\triangleright \underline{\neg(int-a \vee int-b)}$ .

**(<sup>Fu</sup>logbitp i integer)**

$\triangleright$  T if zero-indexed *i*th bit of *integer* is set.

**(<sup>Fu</sup>logtest int-a int-b)**

$\triangleright$  Return T if there is any bit set in *int-a* which is set in *int-b* as well.

**(<sup>Fu</sup>logcount int)**

$\triangleright$  Number of 1 bits in int  $\geq 0$ , number of 0 bits in int  $< 0$ .

## 1.4 Integer Functions

**(<sup>Fu</sup>integer-length integer)**

$\triangleright$  Number of bits necessary to represent integer.

**(<sup>Fu</sup>ldb-test byte-spec integer)**

$\triangleright$  Return T if any bit specified by *byte-spec* in *integer* is set.

**(<sup>Fu</sup>ash integer count)**

$\triangleright$  Return copy of *integer* arithmetically shifted left by *count* adding zeros at the right, or, for *count*  $< 0$ , shifted right discarding bits.

**(<sup>Fu</sup>ldb byte-spec integer)**

$\triangleright$  Extract byte denoted by *byte-spec* from *integer*. **settable**.

**(<sup>Fu</sup>{deposit-field  
dpb})** *int-a byte-spec int-b*

$\triangleright$  Return int-b with bits denoted by *byte-spec* replaced by corresponding bits of *int-a*, or by the low (**byte-size** *byte-spec*) bits of *int-a*, respectively.

**(<sup>Fu</sup>mask-field byte-spec integer)**

$\triangleright$  Return copy of *integer* with all bits unset but those denoted by *byte-spec*. **settable**.

**(<sup>Fu</sup>byte size position)**

$\triangleright$  Byte specifier for a byte of *size* bits starting at a weight of  $2^{position}$ .

**(<sup>Fu</sup>byte-size byte-spec)**

**(<sup>Fu</sup>byte-position byte-spec)**

$\triangleright$  Size or position, respectively, of *byte-spec*.

### 1.5 Implementation-Dependent

short-float }  
single-float } - {epsilon  
double-float } {negative-epsilon  
long-float }

▷ Smallest possible number making a difference when added or subtracted, respectively.

<sup>co</sup> least-negative	}	-	short-float
<sup>co</sup> least-negative-normalized			single-float
<sup>co</sup> least-positive			double-float
<sup>co</sup> least-positive-normalized			long-float

▷ Available numbers closest to  $-0$  or  $+0$ , respectively.

$\left. \begin{array}{l} \text{co} \\ \text{most-negative} \\ \text{co} \\ \text{most-positive} \end{array} \right\} - \left\{ \begin{array}{l} \text{short-float} \\ \text{single-float} \\ \text{double-float} \\ \text{long-float} \\ \text{fixnum} \end{array} \right.$

▷ Available numbers closest to  $-\infty$  or  $+\infty$ , respectively.

(<sup>F<sub>u</sub></sup>decode-float *n*)  
(<sup>F<sub>u</sub></sup>integer-decode-float *n*)

▷ Return significand, exponent, and sign of **float**  $n$ .

$$(\text{scale-float } n \ [i])$$

- ▷ With  $n$ 's radix  $b$ , return  $nb^i$ .

$$(\overset{F_u}{\text{float-radix}}\ n)$$
$$\left( \text{float-digits } n \right)_{Fu}$$

(float-precision  $n$ )

▷ Radix, number of digits in that radix, or precision in that radix, respectively, of float  $n$ .

(<sup>Fu</sup>**upgraded-complex-part-type** *foo* [*environment*<sub>NIL</sub>])

- ▷ Type of most specialized **complex** number able to hold parts of type *foo*.

## 2 Characters

The **standard-char** type comprises a-z, A-Z, 0-9, Newline, Space, and !?"\$%&'()\*+,-./:;=<=>#@&() [] {}.

$$\begin{array}{l} \text{(characterp } foo) \\ \text{(standard-char-p } char) \end{array} \triangleright \underline{T} \text{ if argument is of indicated type.}$$

(<sup>Fu</sup>**graphic-char-p** *character*)

( $\alpha$ -char-p character)

(<sup>Fu</sup>**alphanumericp** *character*)

▷ T if *character* is visible, alphabetic, or alphanumeric, respectively.

(<sup>F<sub>u</sub></sup>upper-case-p *character*)

(lower-case-p character)

(<sup>Fu</sup>**both-case-p** *character*)

▷ Return T if *character* is uppercase, lowercase, or able to be in another case, respectively.

$$(\text{digit-char-p } \text{character } [\text{radix}_{10}])$$

▷ Return its weight if *character* is a digit, or NIL otherwise.

$$(\text{char}^{\text{Fu}} = \text{character}^+)$$
$$(\text{char}^+)$$

▷ Return **T** if all *characters*, or none, respectively, are equal.

 $(\text{char-equal}^{\text{Fu}} \text{ character}^+)$ 

(<sup>Fu</sup>**char-not-equal** *character*<sup>+</sup>)

▷ Return T if all *characters*, or none, respectively, are equal ignoring case.

$$(\text{char}^{\text{Fu}} > \text{character}^+)$$
$$(\text{char} \geq \text{character}^+)$$
$$(\text{char}^{\text{Fu}} < \text{character}^+)$$

(**char**  $\leq$  *character*<sup>+</sup>)

▷ Return **T** if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

(<sup>Fu</sup>char string i)  
(<sup>Fu</sup>schar string i)

▷ Return zero-indexed ith character of string ignoring/obeying, respectively, fill pointer. **setfable**.

(<sup>Fu</sup>parse-integer string {  
:start start<sub>[0]</sub>  
:end end<sub>[NIL]</sub>  
:radix int<sub>[10]</sub>  
:junk-allowed bool<sub>[NIL]</sub>})

▷ Return integer parsed from string and index of parse end.

## 4 Conses

### 4.1 Predicates

(<sup>Fu</sup>cons foo)  
(<sup>Fu</sup>list foo)

▷ Return T if foo is of indicated type.

(<sup>Fu</sup>endp list)  
(<sup>Fu</sup>null foo)

▷ Return T if list/foo is NIL.

(<sup>Fu</sup>atom foo)

▷ Return T if foo is not a **cons**.

(<sup>Fu</sup>tailp foo list)

▷ Return T if foo is a tail of list.

(<sup>Fu</sup>member foo list {  
:test function<sub>[#'=]</sub>  
:test-not function  
:key function})

▷ Return tail of list starting with its first element matching foo. Return NIL if there is no such element.

(<sup>Fu</sup>member-if  
<sup>Fu</sup>member-if-not) test list [:key function]

▷ Return tail of list starting with its first element satisfying test. Return NIL if there is no such element.

(<sup>Fu</sup>subsetp list-a list-b {  
:test function<sub>[#'=]</sub>  
:test-not function  
:key function})

▷ Return T if list-a is a subset of list-b.

### 4.2 Lists

(<sup>Fu</sup>cons foo bar)

▷ Return new cons (foo . bar).

(<sup>Fu</sup>list foo\*)

▷ Return list of foos.

(<sup>Fu</sup>list\* foo<sup>+</sup>)

▷ Return list of foos with last foo becoming cdr of last cons. Return foo if only one foo given.

(<sup>Fu</sup>make-list num [:initial-element foo<sub>[NIL]</sub>])

▷ New list with num elements set to foo.

(<sup>Fu</sup>list-length list)

▷ Length of list; NIL for circular list.

(<sup>Fu</sup>car list)

▷ Car of list or NIL if list is NIL. **setfable**.

(<sup>Fu</sup>cdr list)

▷ Cdr of list or NIL if list is NIL. **setfable**.

(<sup>Fu</sup>rest list)

(<sup>Fu</sup>nthcdr n list)

▷ Return tail of list after calling <sup>Fu</sup>cdr n times.

(<sup>Fu</sup>{first|second|third|fourth|fifth|sixth}...<sup>Fu</sup>{ninth|tenth} list)

▷ Return nth element of list if any, or NIL otherwise. **setfable**.

(<sup>Fu</sup>nth n list)

▷ Zero-indexed nth element of list. **setfable**.

(<sup>Fu</sup>cXr list)

▷ With X being one to four as and ds representing <sup>Fu</sup>cars and <sup>Fu</sup>cdrs, e.g. (<sup>Fu</sup>cadr bar) is equivalent to (<sup>Fu</sup>car (<sup>Fu</sup>cdr bar)). **setfable**.

(<sup>Fu</sup>last list [num<sub>[1]</sub>])

▷ Return list of last num conses of list.

## 15.3 REPL and Debugging

```
var|var|var|var|
+|+|+|+|
var|var|var|var|
*|*|*|*|
var|var|var|var|
//|//|//|//|
```

▷ Last, penultimate, or antepenultimate form evaluated in the REPL, or their respective primary value, or a list of their respective values.

var

▷ Form currently being evaluated by the REPL.

(<sup>Fu</sup>apropos string [package<sub>[NIL]</sub>])

▷ Print interned symbols containing string.

(<sup>Fu</sup>apropos-list string [package<sub>[NIL]</sub>])

▷ List of interned symbols containing string.

(<sup>Fu</sup>dribble [path])

▷ Save a record of interactive session to file at path. Without path, close that file.

(<sup>Fu</sup>ed [file-or-function<sub>[NIL]</sub>])

▷ Invoke editor if possible.

(<sup>Fu</sup>{macroexpand-1  
<sup>Fu</sup>macroexpand} form [environment<sub>[NIL]</sub>])

▷ Return macro expansion, once or entirely, respectively, of form and T if form was a macro form. Return form and NIL otherwise.

var  
\*macroexpand-hook\*

▷ Function of arguments expansion function, macro form, and environment called by <sup>Fu</sup>macroexpand-1 to generate macro expansions.

(<sup>M</sup>trace {function  
(setf function)}\*)

▷ Cause functions to be traced. With no arguments, return list of traced functions.

(<sup>M</sup>untrace {function  
(setf function)}\*)

▷ Stop functions, or each currently traced function, from being traced.

var  
\*trace-output\*

▷ Stream <sup>M</sup>trace and <sup>M</sup>time print their output on.

(<sup>M</sup>step form)

▷ Step through evaluation of form. Return values of form.

(<sup>Fu</sup>break [control arg\*])

▷ Jump directly into debugger; return NIL. See p. 36, <sup>Fu</sup>format, for control and args.

(<sup>M</sup>time form)

▷ Evaluate forms and print timing information to <sup>var</sup>\*trace-output\*. Return values of form.

(<sup>Fu</sup>inspect foo)

▷ Interactively give information about foo.

(<sup>Fu</sup>describe foo [stream<sub>[var</sub>\*standard-output\*]])

▷ Send information about foo to stream.

(<sup>F</sup>describe-object foo [stream])

▷ Send information about foo to stream. Not to be called by user.

(<sup>Fu</sup>disassemble function)

▷ Send disassembled representation of function to <sup>var</sup>\*standard-output\*. Return NIL.

$(^{Fu} \text{compile-file } file \left\{ \begin{array}{l} \text{:output-file } out\text{-}path \\ \text{:verbose } bool \text{ } \overline{load\text{-}verbose*} \\ \text{:print } bool \text{ } \overline{compile\text{-}print*} \\ \text{:external-format } file\text{-}format \text{ } \overline{default} \end{array} \right\})$

▷ Write compiled contents of *file* to *out-path*. Return true output path or NIL, T in case of warnings or errors, T in case of warnings or errors excluding style warnings.

$(^{Fu} \text{compile-file-pathname } file \text{ } \overline{[:output-file } path] \text{ } [other\text{-}keyargs])$   
▷ Pathname compile-file writes to if invoked with the same arguments.

$(^{Fu} \text{load } path \left\{ \begin{array}{l} \text{:verbose } bool \text{ } \overline{load\text{-}verbose*} \\ \text{:print } bool \text{ } \overline{load\text{-}print*} \\ \text{:if-does-not-exist } bool \text{ } \overline{nil} \\ \text{:external-format } file\text{-}format \text{ } \overline{default} \end{array} \right\})$

▷ Load source file or compiled file into Lisp environment. Return T if successful.

$\left. \begin{array}{l} \text{var} \\ *compile-file* \\ *load* \end{array} \right\} \left\{ \begin{array}{l} \text{pathname} \text{ } \overline{nil} \\ \text{truename} \text{ } \overline{nil} \end{array} \right. \text{ } ^{Fu}$

▷ Input file used by compile-file/by load.

$\left. \begin{array}{l} \text{var} \\ *compile* \\ *load* \end{array} \right\} \left\{ \begin{array}{l} \text{print*} \\ \text{verbose*} \end{array} \right. \text{ } ^{Fu}$   
▷ Defaults used by compile-file/by load.

$(^{sO} \text{eval-when } (\left\{ \begin{array}{l} \text{:compile-toplevel} \text{ } \overline{compile} \\ \text{:load-toplevel} \text{ } \overline{load} \\ \text{:execute} \text{ } \overline{eval} \end{array} \right\}) \text{ } form^R_k)$

▷ Return values of forms if eval-when is in the top-level of a file being compiled, in the top-level of a compiled file being loaded, or anywhere, respectively. Return NIL if *forms* are not evaluated. (compile, load and eval deprecated.)

$(^{sO} \text{locally } (\text{declare } \widehat{decl}^*) \text{ } form^R_k)$   
▷ Evaluate *forms* in a lexical environment with declarations *decl* in effect. Return values of forms.

$(^M \text{with-compilation-unit } ([:\text{override } bool \text{ } \overline{nil}]) \text{ } form^R_k)$   
▷ Return values of forms. Warnings deferred by the compiler until end of compilation are deferred until the end of evaluation of *forms*.

$(^{sO} \text{load-time-value } form \text{ } \overline{[read-only \text{ } \overline{nil}]})$   
▷ Evaluate *form* at compile time and treat its value as literal at run time.

$(^{sO} \text{quote } \widehat{foo})$  ▷ Return unevaluated foo.

$(^{EF} \text{make-load-form } foo \text{ } [environment])$   
▷ Its methods are to return a creation form which on evaluation at load time returns an object equivalent to *foo*, and an optional initialization form which on evaluation performs some initialization of the object.

$(^{Fu} \text{make-load-form-saving-slots } foo \left\{ \begin{array}{l} \text{:slot-names } slots \text{ } \overline{[all \text{ } \overline{local} \text{ } \overline{slots}]} \\ \text{:environment } environment \end{array} \right\})$   
▷ Return a creation form and an initialization form which on evaluation construct an object equivalent to *foo* with *slots* initialized with the corresponding values from *foo*.

$(^{Fu} \text{macro-function } symbol \text{ } [environment])$   
 $(^{Fu} \text{compiler-macro-function } \left\{ \begin{array}{l} \text{name} \\ \text{setf name} \end{array} \right\} \text{ } [environment])$   
▷ Return specified macro function, or compiler macro function, respectively, if any. Return NIL otherwise. setfable.

$(^{Fu} \text{eval } arg)$   
▷ Return values of value of arg evaluated in global environment.

$\left\{ \begin{array}{l} \text{butlast } list \\ \text{nbutlast } list \end{array} \right\} \text{ } [num \text{ } \overline{1}]$  ▷ *list* excluding last *num* conses.

$\left\{ \begin{array}{l} \text{rplaca} \\ \text{rplacd} \end{array} \right\} \text{ } cons \text{ } object$   
▷ Replace car, or cdr, respectively, of cons with *object*.

$(^{Fu} \text{ldiff } list \text{ } foo)$   
▷ If *foo* is a tail of *list*, return preceding part of list. Otherwise return list.

$(^{Fu} \text{adjoin } foo \text{ } list \left\{ \begin{array}{l} \text{:test } function \text{ } \overline{[ \text{#'} \text{ } \overline{eq} ]]} \\ \text{:test-not } function \\ \text{:key } function \end{array} \right\})$   
▷ Return *list* if *foo* is already member of *list*. If not, return  $(^{Fu} \text{cons } foo \text{ } list)$ .

$(^{M} \text{pop } \widehat{place})$  ▷ Set *place* to  $(^{Fu} \text{cdr } place)$ , return  $(^{Fu} \text{car } place)$ .

$(^{M} \text{push } foo \text{ } \widehat{place})$  ▷ Set *place* to  $(^{Fu} \text{cons } foo \text{ } place)$ .

$(^{M} \text{pushnew } foo \text{ } \widehat{place} \left\{ \begin{array}{l} \text{:test } function \text{ } \overline{[ \text{#'} \text{ } \overline{eq} ]]} \\ \text{:test-not } function \\ \text{:key } function \end{array} \right\})$   
▷ Set *place* to  $(^{Fu} \text{adjoin } foo \text{ } place)$ .

$(^{Fu} \text{append } [proper\text{-}list^* \text{ } foo \text{ } \overline{nil}])$   
 $(^{Fu} \text{nconc } [non\text{-}circular\text{-}list^* \text{ } foo \text{ } \overline{nil}])$   
▷ Return concatenated list or, with only one argument, *foo*. *foo* can be of any type.

$(^{Fu} \text{revappend } list \text{ } foo)$   
 $(^{Fu} \text{nreconc } \widehat{list} \text{ } foo)$   
▷ Return concatenated list after reversing order in *list*.

$\left\{ \begin{array}{l} \text{mapcar} \\ \text{maplist} \end{array} \right\} \text{ } function \text{ } list^+$   
▷ Return list of return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*.

$\left\{ \begin{array}{l} \text{mapcan} \\ \text{mapcon} \end{array} \right\} \text{ } function \text{ } list^+$   
▷ Return list of concatenated return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should return a list.

$\left\{ \begin{array}{l} \text{mapc} \\ \text{mapl} \end{array} \right\} \text{ } function \text{ } list^+$   
▷ Return first *list* after successively applying *function* to corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should have some side effects.

$(^{Fu} \text{copy-list } list)$  ▷ Return copy of *list* with shared elements.

### 4.3 Association Lists

$(^{Fu} \text{pairlis } keys \text{ } values \text{ } [alist \text{ } \overline{nil}])$   
▷ Prepend to alist an association list made from lists *keys* and *values*.

$(^{Fu} \text{acons } key \text{ } value \text{ } alist)$   
▷ Return alist with a (*key* . *value*) pair added.

$\left\{ \begin{array}{l} \text{assoc} \\ \text{rassoc} \end{array} \right\} \text{ } foo \text{ } alist \left\{ \begin{array}{l} \text{:test } test \text{ } \overline{[ \text{#'} \text{ } \overline{eq} ]]} \\ \text{:test-not } test \\ \text{:key } function \end{array} \right\}$   
 $\left\{ \begin{array}{l} \text{assoc-if} \text{ } \overline{[ \text{not} ]} \\ \text{rassoc-if} \text{ } \overline{[ \text{not} ]} \end{array} \right\} \text{ } test \text{ } alist \text{ } \overline{[:key \text{ } function]}$   
▷ First cons whose car, or cdr, respectively, satisfies *test*.

$(^{Fu} \text{copy-alist } alist)$  ▷ Return copy of *alist*.

## 4.4 Trees

(<sup>Fu</sup>**tree-equal** *foo bar* {<sup>Fu</sup>**test** *test* <sup>Fu</sup>**test-not** *test*})

▷ Return T if trees *foo* and *bar* have same shape and leaves satisfying *test*.

{<sup>Fu</sup>**subst** *new old tree* } {<sup>Fu</sup>**test** *function* <sup>Fu</sup>**test-not** *function* }  
{<sup>Fu</sup>**nsbst** *new old tree* } {<sup>Fu</sup>**key** *function* }

▷ Make copy of *tree* with each subtree or leaf matching *old* replaced by *new*.

{<sup>Fu</sup>**subst-if[-not]** *new test tree* } [<sup>Fu</sup>**key** *function*]

▷ Make copy of *tree* with each subtree or leaf satisfying *test* replaced by *new*.

{<sup>Fu</sup>**sublis** *association-list tree* } {<sup>Fu</sup>**test** *function* <sup>Fu</sup>**test-not** *function* }  
{<sup>Fu</sup>**nsbdis** *association-list tree* } {<sup>Fu</sup>**key** *function* }

▷ Make copy of *tree* with each subtree or leaf matching a key in *association-list* replaced by that key's value.

(<sup>Fu</sup>**copy-tree** *tree*) ▷ Copy of *tree* with same shape and leaves.

## 4.5 Sets

{<sup>Fu</sup>**intersection** } {<sup>Fu</sup>**test** *function* <sup>Fu</sup>**test-not** *function* }  
{<sup>Fu</sup>**set-difference** } {<sup>Fu</sup>**test** *function* <sup>Fu</sup>**test-not** *function* }  
{<sup>Fu</sup>**union** } {<sup>Fu</sup>**key** *function* }  
{<sup>Fu</sup>**set-exclusive-or** } {<sup>Fu</sup>**test** *function* <sup>Fu</sup>**test-not** *function* }  
{<sup>Fu</sup>**nintersection** } {<sup>Fu</sup>**key** *function* }  
{<sup>Fu</sup>**nset-difference** } {<sup>Fu</sup>**test** *function* <sup>Fu</sup>**test-not** *function* }  
{<sup>Fu</sup>**nunion** } {<sup>Fu</sup>**key** *function* }  
{<sup>Fu</sup>**nset-exclusive-or** } {<sup>Fu</sup>**test** *function* <sup>Fu</sup>**test-not** *function* }

▷ Return  $a \cap b$ ,  $a \setminus b$ ,  $a \cup b$ , or  $a \triangle b$ , respectively, of lists *a* and *b*.

## 5 Arrays

### 5.1 Predicates

(<sup>Fu</sup>**arrayp** *foo*)

(<sup>Fu</sup>**vectorp** *foo*)

(<sup>Fu</sup>**simple-vector-p** *foo*)

▷ T if *foo* is of indicated type.

(<sup>Fu</sup>**bit-vector-p** *foo*)

(<sup>Fu</sup>**simple-bit-vector-p** *foo*)

(<sup>Fu</sup>**adjustable-array-p** *array*)

(<sup>Fu</sup>**array-has-fill-pointer-p** *array*)

▷ T if *array* is adjustable/has a fill pointer, respectively.

(<sup>Fu</sup>**array-in-bounds-p** *array* [*subscripts*])

▷ Return T if *subscripts* are in *array*'s bounds.

### 5.2 Array Functions

{<sup>Fu</sup>**make-array** *dimension-sizes* [<sup>Fu</sup>**adjustable** *bool* <sup>Fu</sup>**ntt**]}  
{<sup>Fu</sup>**adjust-array** *array dimension-sizes* }  
{<sup>Fu</sup>**element-type** *type* <sup>Fu</sup>**fill-pointer** {*num* *bool*} <sup>Fu</sup>**ntt** }  
{<sup>Fu</sup>**initial-element** *obj* }  
{<sup>Fu</sup>**initial-contents** *sequence* }  
{<sup>Fu</sup>**displaced-to** *array* <sup>Fu</sup>**displaced-index-offset** *i* <sup>Fu</sup>**ntt** }

▷ Return fresh, or readjust, respectively, vector or array.

(<sup>Fu</sup>**aref** *array* [*subscripts*])

▷ Return array element pointed to by *subscripts*. **setfable**.

(<sup>Fu</sup>**row-major-aref** *array* *i*)

▷ Return *i*th element of *array* in row-major order. **setfable**.

## 14.3 Symbols

A **symbol** has the attributes *name*, home **package**, property list, and optionally value (of global constant or variable *name*) and function (**function**, macro, or special operator *name*).

(<sup>Fu</sup>**make-symbol** *name*)

▷ Make fresh, uninterned symbol *name*.

(<sup>Fu</sup>**gensym** [*s* <sup>Fu</sup>**ntt**])

▷ Return fresh, uninterned symbol  $\#s:n$  with *n* from <sup>var</sup>**\*gensym-counter\***. Increment <sup>var</sup>**\*gensym-counter\***.

(<sup>Fu</sup>**gentemp** [*prefix* <sup>Fu</sup>**ntt**] [*package* <sup>var</sup>**\*package\***])

▷ Intern fresh symbol in *package*. Deprecated.

(<sup>Fu</sup>**copy-symbol** *symbol* [*props* <sup>Fu</sup>**ntt**])

▷ Return uninterned copy of *symbol*. If *props* is T, give copy the same value, function and property list.

(<sup>Fu</sup>**symbol-name** *symbol*)

(<sup>Fu</sup>**symbol-package** *symbol*)

(<sup>Fu</sup>**symbol-plist** *symbol*)

(<sup>Fu</sup>**symbol-value** *symbol*)

(<sup>Fu</sup>**symbol-function** *symbol*)

▷ Name, package, property list, value, or function, respectively, of *symbol*. **setfable**.

{<sup>F</sup>**documentation** } {<sup>F</sup>**variable** | **function** }  
{<sup>F</sup>**(setf documentation)** *new-doc* } {<sup>F</sup>**compiler-macro** }  
{<sup>F</sup>**documentation** } {<sup>F</sup>**method-combination** }  
{<sup>F</sup>**documentation** } {<sup>F</sup>**structure** | **type** | **setf** | **T** }

▷ Get/set documentation string of *foo* of given type.

<sup>F</sup>**t**

▷ Truth; the supertype of every type including **t**; the superclass of every class except **t**; <sup>var</sup>**\*terminal-io\***.

<sup>co</sup>**nil**

▷ Falsity; the empty list; the empty type, subtype of every type; <sup>var</sup>**\*standard-input\***; <sup>var</sup>**\*standard-output\***; the global environment.

## 14.4 Standard Packages

**common-lisp|cl**

▷ Exports the defined names of Common Lisp except for those in the **keyword** package.

**common-lisp-user|cl-user**

▷ Current package after startup; uses package **common-lisp**.

**keyword**

▷ Contains symbols which are defined to be of type **keyword**.

## 15 Compiler

### 15.1 Predicates

(<sup>Fu</sup>**special-operator-p** *foo*)

▷ T if *foo* is a special operator.

(<sup>Fu</sup>**compiled-function-p** *foo*)

▷ T if *foo* is of type **compiled-function**.

### 15.2 Compilation

(<sup>Fu</sup>**compile** {<sup>Fu</sup>**NIL** *definition* }  
{<sup>Fu</sup>**name** } [*definition*]  
{<sup>Fu</sup>**(setf name)** } [*definition*])

▷ Return compiled function or replace *name*'s function definition with the compiled function. Return T in case of warnings or errors, and T in case of warnings or errors excluding style warnings.

<sup>Fu</sup>(**package-use-list** *package*)  
<sup>Fu</sup>(**package-used-by-list** *package*)  
 ▷ List of other packages used by/using *package*.

<sup>Fu</sup>(**delete-package** *package*)  
 ▷ Delete *package*. Return T if successful.

<sup>var</sup>**\*package\***<sub>common-lisp-user</sub> ▷ The current package.

<sup>Fu</sup>(**list-all-packages**) ▷ List of registered packages.

<sup>Fu</sup>(**package-name** *package*) ▷ Name of *package*.

<sup>Fu</sup>(**package-nicknames** *package*) ▷ List of nicknames of *package*.

<sup>Fu</sup>(**find-package** *name*) ▷ Package with *name* (case-sensitive).

<sup>Fu</sup>(**find-all-symbols** *foo*)  
 ▷ List of symbols *foo* from all registered packages.

<sup>Fu</sup>{**intern**  
**find-symbol**} *foo* [*package* <sup>var</sup>**\*package\***]  
 ▷ Intern or find, respectively, symbol *foo* in *package*. Second return value is one of **:internal**, **:external**, or **:inherited** (or NIL if <sup>Fu</sup>**intern** created a fresh symbol).

<sup>Fu</sup>(**unintern** *symbol* [*package* <sup>var</sup>**\*package\***])  
 ▷ Remove *symbol* from *package*, return T on success.

<sup>Fu</sup>{**import**  
**shadowing-import**} *symbols* [*package* <sup>var</sup>**\*package\***]  
 ▷ Make *symbols* internal to *package*. Return T. In case of a name conflict signal correctable **package-error** or shadow the old symbol, respectively.

<sup>Fu</sup>(**shadow** *symbols* [*package* <sup>var</sup>**\*package\***])  
 ▷ Make *symbols* of *package* shadow any otherwise accessible, equally named symbols from other packages. Return T.

<sup>Fu</sup>(**package-shadowing-symbols** *package*)  
 ▷ List of symbols of *package* that shadow any otherwise accessible, equally named symbols from other packages.

<sup>Fu</sup>(**export** *symbols* [*package* <sup>var</sup>**\*package\***])  
 ▷ Make *symbols* external to *package*. Return T.

<sup>Fu</sup>(**unexport** *symbols* [*package* <sup>var</sup>**\*package\***])  
 ▷ Revert *symbols* to internal status. Return T.

<sup>M</sup>{**do-symbols**  
**do-external-symbols**} (*var* [*package* <sup>var</sup>**\*package\***] [*result* NIL])  
<sup>M</sup>**do-all-symbols** (*var* [*result* NIL])  
 (**declare** *decl\**) \* {*tag*  
*form*} \*  
 ▷ Evaluate <sup>so</sup>**tagbody**-like body with *var* successively bound to every symbol from *package*, to every external symbol from *package*, or to every symbol from all registered packages, respectively. Return values of *result*. Implicitly, the whole form is a <sup>so</sup>**block** named NIL.

<sup>M</sup>(**with-package-iterator** (*foo packages* [:internal|:external|:inherited])  
 (**declare** *decl\**) \* *form*<sub>Pk</sub>)  
 ▷ Return values of *forms*. In *forms*, successive invocations of (*foo*) return: T if a symbol is returned; a symbol from *packages*; accessibility (:internal, :external, or :inherited); and the package the symbol belongs to.

<sup>Fu</sup>(**require** *module* [*paths* NIL])  
 ▷ If not in **\*modules\***, try *paths* to load *module* from. Signal **error** if unsuccessful. Deprecated.

<sup>Fu</sup>(**provide** *module*)  
 ▷ If not already there, add *module* to **\*modules\***. Deprecated.

<sup>var</sup>**\*modules\*** ▷ List of names of loaded modules.

<sup>Fu</sup>(**array-row-major-index** *array* [*subscripts*])  
 ▷ Index in row-major order of the element denoted by *subscripts*.

<sup>Fu</sup>(**array-dimensions** *array*)  
 ▷ List containing the lengths of *array*'s dimensions.

<sup>Fu</sup>(**array-dimension** *array* *i*)  
 ▷ Length of *i*th dimension of *array*.

<sup>Fu</sup>(**array-total-size** *array*) ▷ Number of elements in *array*.

<sup>Fu</sup>(**array-rank** *array*) ▷ Number of dimensions of *array*.

<sup>Fu</sup>(**array-displacement** *array*) ▷ Target array and offset.

<sup>Fu</sup>(**bit** *bit-array* [*subscripts*])  
<sup>Fu</sup>(**sbit** *simple-bit-array* [*subscripts*])  
 ▷ Return element of *bit-array* or of *simple-bit-array*. **setf**-able.

<sup>Fu</sup>(**bit-not** *bit-array* [*result-bit-array* NIL])  
 ▷ Return result of bitwise negation of *bit-array*. If *result-bit-array* is T, put result in *bit-array*; if it is NIL, make a new array for result.

<sup>Fu</sup>{**bit-eqv**  
**bit-and**  
**bit-andc1**  
**bit-andc2**  
**bit-nand**  
**bit-ior**  
**bit-orc1**  
**bit-orc2**  
**bit-xor**  
**bit-nor**} *bit-array-a bit-array-b* [*result-bit-array* NIL]  
 ▷ Return result of bitwise logical operations (cf. operations of **boole**, p. 4) on *bit-array-a* and *bit-array-b*. If *result-bit-array* is T, put result in *bit-array-a*; if it is NIL, make a new array for result.

<sup>co</sup>**array-rank-limit** ▷ Upper bound of array rank;  $\geq 8$ .

<sup>co</sup>**array-dimension-limit**  
 ▷ Upper bound of an array dimension;  $\geq 1024$ .

<sup>co</sup>**array-total-size-limit** ▷ Upper bound of array size;  $\geq 1024$ .

### 5.3 Vector Functions

Vectors can as well be manipulated by sequence functions; see section 6.

<sup>Fu</sup>(**vector** *foo* \*) ▷ Return fresh simple vector of *foos*.

<sup>Fu</sup>(**svref** *vector* *i*) ▷ Return element *i* of simple *vector*. **setf**-able.

<sup>Fu</sup>(**vector-push** *foo vector*)  
 ▷ Return NIL if *vector*'s fill pointer equals size of *vector*. Otherwise replace element of *vector* pointed to by fill pointer with *foo*; then increment fill pointer.

<sup>Fu</sup>(**vector-push-extend** *foo vector* [*num*])  
 ▷ Replace element of *vector* pointed to by fill pointer with *foo*, then increment fill pointer. Extend *vector*'s size by  $\geq$  *num* if necessary.

<sup>Fu</sup>(**vector-pop** *vector*)  
 ▷ Return element of *vector* its fillpointer points to after decrementation.

<sup>Fu</sup>(**fill-pointer** *vector*) ▷ Fill pointer of *vector*. **setf**-able.

## 6 Sequences

### 6.1 Sequence Predicates

$\left\{ \begin{smallmatrix} \text{Fu} \\ \text{every} \\ \text{notevery} \end{smallmatrix} \right\}$  *test sequence*<sup>+</sup>)

▷ Return NIL or T, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns NIL.

$\left\{ \begin{smallmatrix} \text{Fu} \\ \text{some} \\ \text{notany} \end{smallmatrix} \right\}$  *test sequence*<sup>+</sup>)

▷ Return value of test or NIL, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns non-NIL.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{mismatch} \end{smallmatrix} \text{ sequence-a sequence-b } \left\{ \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:test function}_{\text{\#eq}} \\ \text{:test-not function} \\ \text{:start1 start-a}_{\text{0}} \\ \text{:start2 start-b}_{\text{0}} \\ \text{:end1 end-a}_{\text{NIL}} \\ \text{:end2 end-b}_{\text{NIL}} \\ \text{:key function} \end{array} \right\} \right)$

▷ Return position in sequence-a where *sequence-a* and *sequence-b* begin to mismatch. Return NIL if they match entirely.

### 6.2 Sequence Functions

$\left( \begin{smallmatrix} \text{Fu} \\ \text{make-sequence} \end{smallmatrix} \text{ sequence-type size } [\text{:initial-element foo}] \right)$

▷ Make sequence of sequence-type with *size* elements.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{concatenate} \end{smallmatrix} \text{ type sequence}^* \right)$

▷ Return concatenated sequence of *type*.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{merge} \end{smallmatrix} \text{ type } \widetilde{\text{sequence-a}} \widetilde{\text{sequence-b}} \text{ test } [\text{:key function}_{\text{NIL}}] \right)$

▷ Return interleaved sequence of *type*. Merged sequence will be sorted if both *sequence-a* and *sequence-b* are sorted.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{fill} \end{smallmatrix} \text{ sequence foo } \left\{ \begin{array}{l} \text{:start start}_{\text{0}} \\ \text{:end end}_{\text{NIL}} \end{array} \right\} \right)$

▷ Return sequence after setting elements between *start* and *end* to *foo*.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{length} \end{smallmatrix} \text{ sequence} \right)$

▷ Return length of sequence (being value of fill pointer if applicable).

$\left( \begin{smallmatrix} \text{Fu} \\ \text{count} \end{smallmatrix} \text{ foo sequence } \left\{ \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:test function}_{\text{\#eq}} \\ \text{:test-not function} \\ \text{:start start}_{\text{0}} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \end{array} \right\} \right)$

▷ Return number of elements in *sequence* which match *foo*.

$\left\{ \begin{smallmatrix} \text{Fu} \\ \text{count-if} \\ \text{count-if-not} \end{smallmatrix} \right\} \text{ test sequence } \left\{ \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:start start}_{\text{0}} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \end{array} \right\}$

▷ Return number of elements in *sequence* which satisfy *test*.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{elt} \end{smallmatrix} \text{ sequence index} \right)$

▷ Return element of sequence pointed to by zero-indexed *index*. setfable.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{subseq} \end{smallmatrix} \text{ sequence start } [\text{end}_{\text{NIL}}] \right)$

▷ Return subsequence of sequence between *start* and *end*. setfable.

$\left\{ \begin{smallmatrix} \text{Fu} \\ \text{sort} \\ \text{stable-sort} \end{smallmatrix} \right\} \widetilde{\text{sequence}} \text{ test } [\text{:key function}]$

▷ Return sequence sorted. Order of elements considered equal is not guaranteed/retained, respectively.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{reverse} \end{smallmatrix} \text{ sequence} \right)$

$\left( \begin{smallmatrix} \text{Fu} \\ \text{nreverse} \end{smallmatrix} \text{ sequence} \right)$  ▷ Return sequence in reverse order.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{load-logical-pathname-translations} \end{smallmatrix} \text{ logical-host} \right)$

▷ Load *logical-host*'s translations. Return NIL if already loaded; return T if successful.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{translate-logical-pathname} \end{smallmatrix} \text{ pathname} \right)$

▷ Physical pathname corresponding to (possibly logical) *pathname*.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{probe-file} \end{smallmatrix} \text{ file} \right)$

$\left( \begin{smallmatrix} \text{Fu} \\ \text{truename} \end{smallmatrix} \text{ file} \right)$

▷ Canonical name of *file*. If *file* does not exist, return NIL/signal file-error, respectively.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{file-write-date} \end{smallmatrix} \text{ file} \right)$

▷ Time at which *file* was last written.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{file-author} \end{smallmatrix} \text{ file} \right)$

▷ Return name of file owner.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{file-length} \end{smallmatrix} \text{ stream} \right)$

▷ Return length of stream.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{rename-file} \end{smallmatrix} \text{ foo bar} \right)$

▷ Rename file *foo* to *bar*. Unspecified components of path *bar* default to those of *foo*. Return new pathname, old physical file name, and new physical file name.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{delete-file} \end{smallmatrix} \text{ file} \right)$

▷ Delete *file*. Return T.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{directory} \end{smallmatrix} \text{ path} \right)$

▷ List of pathnames matching *path*.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{ensure-directories-exist} \end{smallmatrix} \text{ path } [\text{:verbose bool}] \right)$

▷ Create parts of path if necessary. Second return value is T if something has been created.

## 14 Packages and Symbols

### 14.1 Predicates

$\left( \begin{smallmatrix} \text{Fu} \\ \text{symbolp} \end{smallmatrix} \text{ foo} \right)$

$\left( \begin{smallmatrix} \text{Fu} \\ \text{packagep} \end{smallmatrix} \text{ foo} \right)$

▷ T if *foo* is of indicated type.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{keywordp} \end{smallmatrix} \text{ foo} \right)$

### 14.2 Packages

*:bar*|**keyword**:*bar*

▷ Keyword, evaluates to :bar.

*package:symbol*

▷ Exported *symbol* of *package*.

*package::symbol*

▷ Possibly unexported *symbol* of *package*.

$\left( \begin{smallmatrix} \text{M} \\ \text{defpackage} \end{smallmatrix} \text{ foo } \left\{ \begin{array}{l} (\text{:nicknames } \text{nick}^*)^* \\ (\text{:documentation } \text{string}) \\ (\text{:intern } \text{interned-symbol}^*)^* \\ (\text{:use } \text{used-package}^*)^* \\ (\text{:import-from } \text{pkg } \text{imported-symbol}^*)^* \\ (\text{:shadowing-import-from } \text{pkg } \text{shd-symbol}^*)^* \\ (\text{:shadow } \text{shd-symbol}^*)^* \\ (\text{:export } \text{exported-symbol}^*)^* \\ (\text{:size } \text{int}) \end{array} \right\} \right)$

▷ Create or modify package foo with *interned-symbols*, *symbols* from *used-packages*, *imported-symbols*, and *shd-symbols*. Add *shd-symbols* to *foo*'s shadowing list.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{make-package} \end{smallmatrix} \text{ foo } \left\{ \begin{array}{l} \text{:nicknames } (\text{nick}^*)_{\text{NIL}} \\ \text{:use } (\text{used-package}^*) \end{array} \right\} \right)$

▷ Create package foo.

$\left( \begin{smallmatrix} \text{Fu} \\ \text{rename-package} \end{smallmatrix} \text{ package new-name } [\text{new-nicknames}_{\text{NIL}}] \right)$

▷ Rename *package*. Return renamed package.

$\left( \begin{smallmatrix} \text{M} \\ \text{in-package} \end{smallmatrix} \widetilde{\text{foo}} \right)$

▷ Make package foo current.

$\left\{ \begin{smallmatrix} \text{Fu} \\ \text{use-package} \\ \text{unuse-package} \end{smallmatrix} \right\} \widetilde{\text{other-packages}} [\text{package}_{\text{var}}^* \text{package}^*]$

▷ Make exported symbols of *other-packages* available in *package*, or remove them from *package*, respectively. Return T.

## 13.7 Pathnames and Files

<sup>Fu</sup>(make-pathname

```

{
  :host {host|NIL|:unspecific}
  :device {device|NIL|:unspecific}
  :directory {
    {directory|:wild|NIL|:unspecific}
    {
      :absolute {
        :wild {
          :wild-inferiors }
        :up
        :back
      }
      :relative
    }
  }
  :name {file-name|:wild|NIL|:unspecific}
  :type {file-type|:wild|NIL|:unspecific}
  :version {newest|version|:wild|NIL|:unspecific}
  :defaults path {host from *default-pathname-defaults*}
  :case {local|common|:local}
}

```

▷ Construct pathname. For **:case** **:local**, leave case of components unchanged. For **:case** **:common**, leave mixed-case components unchanged; convert all-uppercase components into local customary case; do the opposite with all-lowercase components.

```

{
  Fupathname-host
  Fupathname-device
  Fupathname-directory
  Fupathname-name
  Fupathname-type
  Fupathname-version path
} path [:case {local|common|:local}]

```

▷ Return pathname component.

```

Fu(parse-namestring foo [host
  [default-pathname *default-pathname-defaults*]
  {
    :start start
    :end end
    :junk-allowed bool
  }]])

```

▷ Return pathname converted from string, pathname, or stream foo; and position where parsing stopped.

```

Fu(merge-pathnames pathname
  [default-pathname *default-pathname-defaults*]
  [default-version :newest])

```

▷ Return pathname after filling in missing components from default-pathname.

<sup>var</sup>\*default-pathname-defaults\*

▷ Pathname to use if one is needed and none supplied.

```

Fu(user-homedir-pathname [host])

```

▷ User's home directory.

```

Fu(enough-namestring path [root-path *default-pathname-defaults*])

```

▷ Return minimal path string to sufficiently describe path relative to root-path.

```

Fu(namestring path)

```

```

Fu(file-namestring path)

```

```

Fu(directory-namestring path)

```

```

Fu(host-namestring path)

```

▷ Return string representing full pathname; name, type, and version; directory name; or host name, respectively, of path.

```

Fu(translate-pathname path wildcard-path-a wildcard-path-b)

```

▷ Translate path from wildcard-path-a into wildcard-path-b. Return new path.

```

Fu(pathname path)

```

▷ Pathname of path.

```

Fu(logical-pathname logical-path)

```

▷ Logical pathname of logical-path. Logical pathnames are represented as all-uppercase #P"[host:][:]{dir}\*}";

```

{
  name}* [
    {type}* [
      {version}*|newest|NEWEST
    ]
  ]

```

```

Fu(logical-pathname-translations logical-host)

```

▷ List of (from-wildcard to-wildcard) translations for logical-host. setfable.

```

{
  {
    Fufind
    Fuposition
  } foo sequence
  {
    :from-end bool
    :test function|:eq|
    :test-not test
    :start start
    :end end
    :key function
  }
}

```

▷ Return first element in sequence which matches foo, or its position relative to the begin of sequence, respectively.

```

{
  {
    Fufind-if
    Fufind-if-not
    Fuposition-if
    Fuposition-if-not
  } test sequence
  {
    :from-end bool
    :start start
    :end end
    :key function
  }
}

```

▷ Return first element in sequence which satisfies test, or its position relative to the begin of sequence, respectively.

```

Fu(search sequence-a sequence-b
  {
    :from-end bool
    :test function|:eq|
    :test-not function
    :start1 start-a
    :start2 start-b
    :end1 end-a
    :end2 end-b
    :key function
  }
)

```

▷ Search sequence-b for a subsequence matching sequence-a. Return position in sequence-b, or NIL.

```

{
  {
    Furemove foo sequence
    Fudelete foo sequence
  }
  {
    :from-end bool
    :test function|:eq|
    :test-not function
    :start start
    :end end
    :key function
    :count count
  }
}

```

▷ Make copy of sequence without elements matching foo.

```

{
  {
    Furemove-if
    Furemove-if-not
    Fudelete-if
    Fudelete-if-not
  } test sequence
  {
    :from-end bool
    :start start
    :end end
    :key function
    :count count
  }
}

```

▷ Make copy of sequence with all (or count) elements satisfying test removed.

```

{
  {
    Furemove-duplicates sequence
    Fudelete-duplicates sequence
  }
  {
    :from-end bool
    :test function|:eq|
    :test-not function
    :start start
    :end end
    :key function
  }
}

```

▷ Make copy of sequence without duplicates.

```

{
  {
    Fusubstitute new old sequence
    Funsubstitute new old sequence
  }
  {
    :from-end bool
    :test function|:eq|
    :test-not function
    :start start
    :end end
    :key function
    :count count
  }
}

```

▷ Make copy of sequence with all (or count) olds replaced by new.

```

{
  {
    Fusubstitute-if
    Fusubstitute-if-not
    Funsubstitute-if
    Funsubstitute-if-not
  } new test sequence
  {
    :from-end bool
    :start start
    :end end
    :key function
    :count count
  }
}

```

▷ Make copy of sequence with all (or count) elements satisfying test replaced by new.

```

Fu(replace sequence-a sequence-b
  {
    :start1 start-a
    :start2 start-b
    :end1 end-a
    :end2 end-b
  }
)

```

▷ Replace elements of sequence-a with elements of sequence-b.

(<sup>Fu</sup>**map** *type function sequence*<sup>+</sup>)  
 ▷ Apply *function* successively to corresponding elements of the *sequences*. Return values as a sequence of *type*. If *type* is NIL, return NIL.

(<sup>Fu</sup>**map-into** *result-sequence function sequence*<sup>\*</sup>)  
 ▷ Store into *result-sequence* successively values of *function* applied to corresponding elements of the *sequences*.

(<sup>Fu</sup>**reduce** *function sequence*  $\left\{ \begin{array}{l} \text{:initial-value } \text{foo}_{\text{NIL}} \\ \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \end{array} \right\}$ )

▷ Starting with the first two elements of *sequence*, apply *function* successively to its last return value together with the next element of *sequence*. Return last value of function.

(<sup>Fu</sup>**copy-seq** *sequence*)  
 ▷ Copy of sequence with shared elements.

## 7 Hash Tables

Key-value storage similar to hash tables can as well be achieved using association lists and property lists; see pages 9 and 16.

(<sup>Fu</sup>**hash-table-p** *foo*)    ▷ Return T if *foo* is of type **hash-table**.

(<sup>Fu</sup>**make-hash-table**  $\left\{ \begin{array}{l} \text{:test } \{\text{eq|eq|equal|equal}\}_{\text{#eq}} \\ \text{:size } \text{int} \\ \text{:rehash-size } \text{num} \\ \text{:rehash-threshold } \text{num} \end{array} \right\}$ )

▷ Make a hash table.

(<sup>Fu</sup>**gethash** *key hash-table* [*default*<sub>NIL</sub>])  
 ▷ Return object with *key* if any or default otherwise; and T if found, NIL otherwise. **setfable**.

(<sup>Fu</sup>**hash-table-count** *hash-table*)  
 ▷ Number of entries in *hash-table*.

(<sup>Fu</sup>**remhash** *key hash-table*)  
 ▷ Remove from *hash-table* entry with *key* and return T if it existed. Return NIL otherwise.

(<sup>Fu</sup>**clrhash** *hash-table*)    ▷ Empty hash-table.

(<sup>Fu</sup>**maphash** *function hash-table*)  
 ▷ Iterate over *hash-table* calling *function* on key and value. Return NIL.

(<sup>M</sup>**with-hash-table-iterator** (*foo hash-table*) (**declare**  $\widehat{\text{decl}}^*$ )<sup>\*</sup> *form*<sup>P\*</sup>)  
 ▷ Return values of forms. In *forms*, invocations of (*foo*) return: T if an entry is returned; its key; its value.

(<sup>Fu</sup>**hash-table-test** *hash-table*)  
 ▷ Test function used in *hash-table*.

(<sup>Fu</sup>**hash-table-size** *hash-table*)  
 (<sup>Fu</sup>**hash-table-rehash-size** *hash-table*)  
 (<sup>Fu</sup>**hash-table-rehash-threshold** *hash-table*)  
 ▷ Current size, rehash-size, or rehash-threshold, respectively, as used in **make-hash-table**.

(<sup>Fu</sup>**sxhash** *foo*)  
 ▷ Hash code unique for any argument <sup>Fu</sup>**equal** *foo*.

(<sup>Fu</sup>**file-position** *stream*  $\left\{ \begin{array}{l} \text{:start} \\ \text{:end} \\ \text{position} \end{array} \right\}$ )  
 ▷ Return position within *stream*, or set it to position and return T on success.

(<sup>Fu</sup>**file-string-length** *stream foo*)  
 ▷ Length *foo* would have in *stream*.

(<sup>Fu</sup>**listen** [*stream* <sup>var</sup>*\*standard-input\**])  
 ▷ T if there is a character in input *stream*.

(<sup>Fu</sup>**clear-input** [*stream* <sup>var</sup>*\*standard-input\**])  
 ▷ Clear input from *stream*, return NIL.

$\left\{ \begin{array}{l} \text{clear-output} \\ \text{force-output} \\ \text{finish-output} \end{array} \right\}$  [*stream* <sup>var</sup>*\*standard-output\**])  
 ▷ End output to *stream* and return NIL immediately, after initiating flushing of buffers, or after flushing of buffers, respectively.

(<sup>Fu</sup>**close** *stream* [*:abort* *bool*<sub>NIL</sub>])  
 ▷ Close *stream*. Return T if *stream* had been open. If *:abort* is T, delete associated file.

(<sup>M</sup>**with-open-file** (*stream path open-arg*<sup>\*</sup>) (**declare**  $\widehat{\text{decl}}^*$ )<sup>\*</sup> *form*<sup>P\*</sup>)  
 ▷ Use **open** with *open-args* to temporarily create *stream* to *path*; return values of forms.

(<sup>M</sup>**with-open-stream** (*foo stream*) (**declare**  $\widehat{\text{decl}}^*$ )<sup>\*</sup> *form*<sup>P\*</sup>)  
 ▷ Evaluate *forms* with *foo* locally bound to *stream*. Return values of forms.

(<sup>M</sup>**with-input-from-string** (*foo string*  $\left\{ \begin{array}{l} \text{:index } \text{index} \\ \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\text{NIL}} \end{array} \right\}$ ) (**declare**  $\widehat{\text{decl}}^*$ )<sup>\*</sup> *form*<sup>P\*</sup>)  
 ▷ Evaluate *forms* with *foo* locally bound to input **string-stream** from *string*. Return values of forms; store next reading position into *index*.

(<sup>M</sup>**with-output-to-string** (*foo* [*string*<sub>NIL</sub>] [*:element-type* *type*<sub>character</sub>]) (**declare**  $\widehat{\text{decl}}^*$ )<sup>\*</sup> *form*<sup>P\*</sup>)  
 ▷ Evaluate *forms* with *foo* locally bound to an output **string-stream**. Append output to *string* and return values of forms if *string* is given. Return string containing output otherwise.

(<sup>Fu</sup>**stream-external-format** *stream*)  
 ▷ External file format designator.

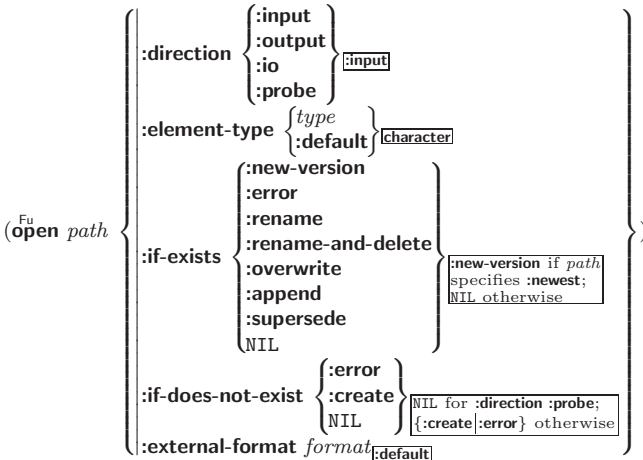

<sup>var</sup>**\*terminal-io\***    ▷ Bidirectional stream to user terminal.

<sup>var</sup>**\*standard-input\***  
<sup>var</sup>**\*standard-output\***  
<sup>var</sup>**\*error-output\***  
 ▷ Standard input stream, standard output stream, or standard error output stream, respectively.

<sup>var</sup>**\*debug-io\***  
<sup>var</sup>**\*query-io\***  
 ▷ Bidirectional streams for debugging and user interaction.

- ~ [**@**] ?
  - ▷ **Recursive Processing.** Process two arguments as control string and argument list. With **@**, take one argument as control string and use then the rest of the original arguments.
- ~ [prefix {,prefix}\*] [:] [**@**] / [package :[:] [cl-user]] function/
  - ▷ **Call Function.** Call all-uppercase *package::function* with the arguments *stream*, *format-argument*, *colon-p*, *at-sign-p* and *prefixes* for printing *format-argument*.
- ~ [:] [**@**] **W**
  - ▷ **Write.** Print argument of any type obeying every printer control variable. With **:**, pretty-print. With **@**, print without limits on length or depth.
- {**V**|#}
  - ▷ In place of the comma-separated prefix parameters: use next argument or number of remaining unprocessed arguments, respectively.

### 13.6 Streams

▷ Open file-stream to *path*.

- <sup>Fu</sup>(**make-concatenated-stream** *input-stream*\*)
- <sup>Fu</sup>(**make-broadcast-stream** *output-stream*\*)
- <sup>Fu</sup>(**make-two-way-stream** *input-stream-part* *output-stream-part*)
- <sup>Fu</sup>(**make-echo-stream** *from-input-stream* *to-output-stream*)
- <sup>Fu</sup>(**make-synonym-stream** *variable-bound-to-stream*)
- ▷ Return stream of indicated type.

- <sup>Fu</sup>(**make-string-input-stream** *string* [*start*] [*end* *NIL*])
- ▷ Return a string-stream supplying the characters from *string*.

- <sup>Fu</sup>(**make-string-output-stream** [:*element-type* *type*] [*character*])
- ▷ Return a string-stream accepting characters (available via <sup>Fu</sup>**get-output-stream-string**).

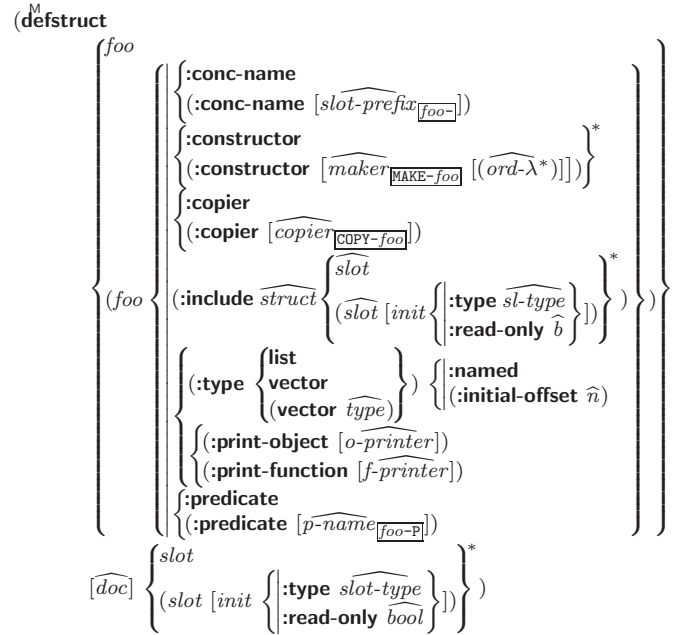

- <sup>Fu</sup>(**concatenated-stream-streams** *concatenated-stream*)
- <sup>Fu</sup>(**broadcast-stream-streams** *broadcast-stream*)
- ▷ Return list of streams *concatenated-stream* still has to read from/*broadcast-stream* is broadcasting to.

- <sup>Fu</sup>(**two-way-stream-input-stream** *two-way-stream*)
- <sup>Fu</sup>(**two-way-stream-output-stream** *two-way-stream*)
- <sup>Fu</sup>(**echo-stream-input-stream** *echo-stream*)
- <sup>Fu</sup>(**echo-stream-output-stream** *echo-stream*)
- ▷ Return source stream or sink stream of *two-way-stream*/*echo-stream*, respectively.

- <sup>Fu</sup>(**synonym-stream-symbol** *synonym-stream*)
- ▷ Return symbol of *synonym-stream*.

- <sup>Fu</sup>(**get-output-stream-string** *string-stream*)
- ▷ Clear and return as a string characters on *string-stream*.

## 8 Structures

▷ Define structure *foo* together with functions *MAKE-foo*, *COPY-foo* and *foo-P*; and **settable** accessors *foo-slot*. Instances are of class *foo* or, if **defstruct** option **:type** is given, of the specified type. They can be created by (*MAKE-foo* {*slot value*}\*) or, if *ord-λ* (see p. 16) is given, by (*maker* *arg*\* {*key value*}\*). In the latter case, *args* and *keys* correspond to the positional and keyword parameters defined in *ord-λ* whose *vars* in turn correspond to *slots*. **:print-object**/**:print-function** generate a **print-object** method for an instance *bar* of *foo* calling (*o-printer bar stream*) or (*f-printer bar stream print-level*), respectively. If **:type** without **:named** is given, no *foo-P* is created.

<sup>Fu</sup>(**copy-structure** *structure*)

▷ Return copy of *structure* with shared slot values.

## 9 Control Structure

### 9.1 Predicates

<sup>Fu</sup>(**eq** *foo bar*) ▷ **T** if *foo* and *bar* are identical.

<sup>Fu</sup>(**eq1** *foo bar*) ▷ **T** if *foo* and *bar* are identical, or the same **character**, or **numbers** of the same type and value.

<sup>Fu</sup>(**equal** *foo bar*) ▷ **T** if *foo* and *bar* are <sup>Fu</sup>**eq1**, or are equivalent **pathnames**, or are **conses** with <sup>Fu</sup>**equal** cars and cdrs, or are **strings** or **bit-vectors** with <sup>Fu</sup>**eq1** elements below their fill pointers.

<sup>Fu</sup>(**equalp** *foo bar*) ▷ **T** if *foo* and *bar* are identical; or are the same **character** ignoring case; or are **numbers** of the same value ignoring type; or are equivalent **pathnames**; or are **conses** or **arrays** of the same shape with <sup>Fu</sup>**equalp** elements; or are structures of the same type with <sup>Fu</sup>**equalp** elements; or are **hash-tables** of the same size with the same **:test** function, the same keys in terms of **:test** function, and **equalp** elements.

<sup>Fu</sup>(**not** *foo*) ▷ **T** if *foo* is *NIL*; *NIL* otherwise.

<sup>Fu</sup>(**boundp** *symbol*) ▷ **T** if *symbol* is a special variable.

<sup>Fu</sup>(**constantp** *foo* [*environment* *env*]) ▷ **T** if *foo* is a constant form.

<sup>Fu</sup>(**functionp** *foo*) ▷ **T** if *foo* is of type **function**.

(<sup>Fu</sup>**fboundp**  $\left\{ \begin{smallmatrix} \text{foo} \\ (\text{setf } \text{foo}) \end{smallmatrix} \right\}$ )  $\triangleright$  T if *foo* is a global function or macro.

## 9.2 Variables

( $\left\{ \begin{smallmatrix} \text{defconstant} \\ \text{defparameter} \end{smallmatrix} \right\}$   $\widehat{\text{foo form [doc]}}$ )

$\triangleright$  Assign value of *form* to global constant/dynamic variable foo.

(<sup>M</sup>**defvar**  $\widehat{\text{foo [form [doc]]}}$ )

$\triangleright$  Unless bound already, assign value of *form* to dynamic variable foo.

( $\left\{ \begin{smallmatrix} \text{setf} \\ \text{psetf} \end{smallmatrix} \right\}$   $\{ \text{place form} \}^*$ )

$\triangleright$  Set *places* to primary values of *forms*. Return values of last form/NIL; work sequentially/in parallel, respectively.

( $\left\{ \begin{smallmatrix} \text{setq} \\ \text{psetq} \end{smallmatrix} \right\}$   $\{ \text{symbol form} \}^*$ )

$\triangleright$  Set *symbols* to primary values of *forms*. Return value of last form/NIL; work sequentially/in parallel, respectively.

(<sup>Fu</sup>**set**  $\widehat{\text{symbol foo}}$ )

$\triangleright$  Set *symbol*'s value cell to foo. Deprecated.

(<sup>M</sup>**multiple-value-setq** *vars form*)

$\triangleright$  Set elements of *vars* to the values of *form*. Return form's primary value.

(<sup>M</sup>**shift**  $\widehat{\text{place}^+ \text{foo}}$ )

$\triangleright$  Store value of *foo* in rightmost *place* shifting values of *places* left, returning first place.

(<sup>M</sup>**rotatef**  $\widehat{\text{place}^*}$ )

$\triangleright$  Rotate values of *places* left, old first becoming new last *place*'s value. Return NIL.

(<sup>Fu</sup>**makunbound**  $\widehat{\text{foo}}$ )

$\triangleright$  Delete special variable foo if any.

(<sup>Fu</sup>**get** *symbol key [default<sub>NIL</sub>]*)

(<sup>Fu</sup>**getf** *place key [default<sub>NIL</sub>]*)

$\triangleright$  First entry *key* from property list stored in *symbol*/in *place*, respectively, or default if there is no *key*. **setfable**.

(<sup>Fu</sup>**get-properties** *property-list keys*)

$\triangleright$  Return key and value of first entry from *property-list* matching a key from *keys*, and tail of *property-list* starting with that key. Return NIL, NIL, and NIL if there was no matching key in *property-list*.

(<sup>Fu</sup>**rmprop**  $\widehat{\text{symbol key}}$ )

(<sup>M</sup>**remf** *place key*)

$\triangleright$  Remove first entry *key* from property list stored in *symbol*/in *place*, respectively. Return T if *key* was there, or NIL otherwise.

## 9.3 Functions

Below, ordinary lambda list (*ord-λ\**) has the form

(*var*\* [**&optional**  $\left\{ \begin{smallmatrix} \text{var} \\ (\text{var } [\text{init}_{\text{NIL}} [\text{supplied-p}]] \end{smallmatrix} \right\}^*$ ] [**&rest** *var*])

[**&key**  $\left\{ \begin{smallmatrix} \text{var} \\ (\{ \text{key } \text{var} \}) \end{smallmatrix} \right\} [\text{init}_{\text{NIL}} [\text{supplied-p}]] \right\}^*$ ]

[**&allow-other-keys**] [**&aux**  $\left\{ \begin{smallmatrix} \text{var} \\ (\text{var } [\text{init}_{\text{NIL}}]) \end{smallmatrix} \right\}^*$ ]).

*supplied-p* is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

{~(*text* ~)|~:(*text* ~)|~@(*text* ~)|~:~@(*text* ~)}

$\triangleright$  **Case-Conversion**. Convert *text* to lowercase, capitalize first letter of each word to uppercase, capitalize first word and convert the rest to lowercase, or convert to uppercase, respectively.

{~P|~:P|~@P|~:~@P}

$\triangleright$  **Plural**. If argument **eq1** print nothing, otherwise print **s**; do the same for the previous argument; if argument **eq1** print **y**, otherwise print **ies**; do the same for the previous argument, respectively.

~ [*n*<sub>sq</sub>] %

$\triangleright$  **Newline**. Print *n* newlines.

~ [*n*<sub>sq</sub>] &

$\triangleright$  **Fresh-Line**. Print *n* – 1 newlines if output stream is at the beginning of a line, or *n* newlines otherwise.

{~|~:~|~@|~:~@}

$\triangleright$  **Conditional Newline**. Print a newline like **pprint-newline** with argument **:linear**, **:fill**, **:miser**, or **:mandatory**, respectively.

{~|~:~|~@|~:~@}

$\triangleright$  **Ignored Newline**. Ignore newline, or whitespace following newline, or both, respectively.

~ [*n*<sub>sq</sub>] |

$\triangleright$  **Page**. Print *n* page separators.

~ [*n*<sub>sq</sub>] ~

$\triangleright$  **Tilde**. Print *n* tildes.

~ [*min-col*<sub>sq</sub>] [*col-inc*<sub>sq</sub>] [*min-pad*<sub>sq</sub>] [*pad-char*<sub>sq</sub>]]  
[: [*l*<sub>sq</sub>] < [*nl-text* ~[*spare*<sub>sq</sub>] [*width*]]:] {*text* ~;}\* *text* ~>

$\triangleright$  **Justification**. Justify text produced by *texts* in a field of at least *min-col* columns. With **:**, right justify; with **@**, left justify. If this would leave less than *spare* characters on the current line, output *nl-text* first.

~ [: [*l*<sub>sq</sub>] < { [*prefix*<sub>sq</sub>] ~;} | [*per-line-prefix* ~@;] } *body* ~; *suffix*<sub>sq</sub>] ~: [*l*<sub>sq</sub>] >

$\triangleright$  **Logical Block**. Act like **pprint-logical-block** using *body* as **format** control string on the elements of the list argument or, with **@**, on the remaining arguments, which are extracted by **pprint-pop**. With **:**, *prefix* and *suffix* default to ( and ). When closed by ~:~@>, spaces in *body* are replaced with conditional newlines.

{~ [*n*<sub>sq</sub>] i|~ [*n*<sub>sq</sub>] :i}

$\triangleright$  **Indent**. Set indentation to *n* relative to leftmost/to current position.

~ [*c*<sub>sq</sub>] [*i*<sub>sq</sub>] [: [*l*<sub>sq</sub>] T

$\triangleright$  **Tabulate**. Move cursor forward to column number *c* + *ki*, *k* ≥ 0 being as small as possible. With **:**, calculate column numbers relative to the immediately enclosing section. With **@**, move to column number *c*<sub>0</sub> + *c* + *ki* where *c*<sub>0</sub> is the current position.

{~ [*m*<sub>sq</sub>] \*|~ [*m*<sub>sq</sub>] :\*|~ [*n*<sub>sq</sub>] @\*}

$\triangleright$  **Go-To**. Jump *m* arguments forward, or backward, or to argument *n*.

~ [*limit*] [: [*l*<sub>sq</sub>] { *text* ~}

$\triangleright$  **Iteration**. Repeat *text* repeatedly, up to *limit*, as control string for the elements of the list argument or (with **@**) for the remaining arguments. With **:** or **:@**, list elements or remaining arguments should be lists of which a new one is used at each iteration step.

~ [*x* [*y* [*z*]]] ^

$\triangleright$  **Escape Upward**. Leave immediately ~< ~>, ~< ~:~>, ~{ ~}, ~?, or the entire <sup>Fu</sup>**format** operation. With one to three prefixes, act only if *x* = 0, *x* = *y*, or *x* ≤ *y* ≤ *z*, respectively.

~ [*i*] [: [*l*<sub>sq</sub>] I [ {*text* ~;}\* *text*] ~:; [*default*] ~]

$\triangleright$  **Conditional Expression**. Use the zero-indexed argument (or *ith* if given) *text* as a <sup>Fu</sup>**format** control subclause. With **:**, use the first *text* if the argument value is NIL, or the second *text* if it is T. With **@**, do nothing for an argument value of NIL. Use the only *text* and leave the argument to be read again if it is T.

(<sup>Fu</sup>**set-pprint-dispatch** *type function* [*priority*  $\square$ ]  
[*table*  $\square$  <sup>var</sup>**\*print-pprint-dispatch\***])  
▷ Install entry comprising *function* of arguments *stream* and object to print; and *priority* as *type* into *table*. If *function* is *NIL*, remove *type* from *table*. Return *NIL*.

(<sup>Fu</sup>**pprint-dispatch** *foo* [*table*  $\square$  <sup>var</sup>**\*print-pprint-dispatch\***])  
▷ Return highest priority *function* associated with type of *foo* and *T* if there was a matching type specifier in *table*.  
 $\square$

(<sup>Fu</sup>**copy-pprint-dispatch** [*table*  $\square$  <sup>var</sup>**\*print-pprint-dispatch\***])  
▷ Return copy of *table* or, if *table* is *NIL*, initial value of <sup>var</sup>**\*print-pprint-dispatch\***.

<sup>var</sup>**\*print-pprint-dispatch\*** ▷ Current pretty print dispatch table.

## 13.5 Format

(<sup>M</sup>**formatter**  $\widehat{control}$ )  
▷ Return function of stream and a **&rest** argument applying <sup>Fu</sup>**format** to stream, *control*, and the **&rest** argument returning *NIL* or any excess arguments.

(<sup>Fu</sup>**format** {*T*|*NIL*|*out-string*|*out-stream*} *control* *arg\**)  
▷ Output string *control* which may contain ~ directives possibly taking some *args*. Alternatively, *control* can be a function returned by **formatter** which is then applied to *out-stream* and *arg\**. Output to *out-string*, *out-stream* or, if first argument is *T*, to <sup>var</sup>**\*standard-output\***. Return *NIL*. If first argument is *NIL*, return formatted output.

~ [*min-col*  $\square$ ] [*col-inc*  $\square$ ] [*min-pad*  $\square$ ] [*pad-char*  $\square$ ]]  
[:] [**@**] {**A**|**S**}  
▷ **Aesthetic/Standard**. Print argument of any type for consumption by humans/by the reader, respectively. With :, print *NIL* as () rather than *nil*; with **@**, add *pad-chars* on the left rather than on the right.

~ [*radix*  $\square$ ] [*width*] [*pad-char*  $\square$ ] [*comma-char*  $\square$ ]  
[,*comma-interval*  $\square$ ]]] [:] [**@**] **R**  
▷ **Radix**. (With one or more prefix arguments.) Print argument as number; with :, group digits *comma-interval* each; with **@**, always prepend a sign.

{~**R**|~**:R**|~**@R**|~**@:R**}  
▷ **Roman**. Take argument as number and print it as English cardinal number, as English ordinal number, as Roman numeral, or as old Roman numeral, respectively.

~ [*width*] [*pad-char*  $\square$ ] [*comma-char*  $\square$ ]  
[,*comma-interval*  $\square$ ]]] [:] [**@**] {**D**|**B**|**O**|**X**}  
▷ **Decimal/Binary/Octal/Hexadecimal**. Print integer argument as number. With :, group digits *comma-interval* each; with **@**, always prepend a sign.

~ [*width*] [*dec-digits*] [*shift*  $\square$ ] [*overflow-char*]  
[,*pad-char*  $\square$ ]]] [**@**] **F**  
▷ **Fixed-Format Floating-Point**. With **@**, always prepend a sign.

~ [*width*] [*int-digits*] [*exp-digits*] [*scale-factor*  $\square$ ]  
[,*overflow-char*] [*pad-char*  $\square$ ] [*exp-char*]]]] [**@**] {**E**|**G**}  
▷ **Exponential/General Floating-Point**. Print argument as floating-point number with *int-digits* before decimal point and *exp-digits* in the signed exponent. With ~**G**, choose either ~**E** or ~**F**. With **@**, always prepend a sign.

~ [*dec-digits*  $\square$ ] [*int-digits*  $\square$ ] [*width*  $\square$ ] [*pad-char*  $\square$ ]]] [:]  
[**@**] **\$**  
▷ **Monetary Floating-Point**. Print argument as fixed-format floating-point number. With :, put sign before any padding; with **@**, always prepend a sign.

{~**C**|~**:C**|~**@C**|~**@:C**}  
▷ **Character**. Print, spell out, print in #\ syntax, or tell how to type, respectively, argument as (possibly non-printing) character.

{<sup>M</sup>**defun** {*foo* (*ord- $\lambda$ \**)  
(**setf** *foo*) (*new-value ord- $\lambda$ \**)} (**declare**  $\widehat{decl}$ )\* [*doc*]  
<sup>M</sup>**lambda** (*ord- $\lambda$ \**)  
*form\**\*)  
▷ Define a function named *foo* or (**setf** *foo*), or an anonymous function, respectively, which applies *forms* to *ord- $\lambda$ s*. For **defun**, *forms* are enclosed in an implicit **block** named *foo*.

{<sup>fl</sup>**let** *labels*} ((*foo* (*ord- $\lambda$ \**)  
(**setf** *foo*) (*new-value ord- $\lambda$ \**)) (**declare**  $\widehat{local-decl}$ )\*  
[*doc*] *local-form\**\*) (**declare**  $\widehat{decl}$ )\* *form\**\*)  
▷ Evaluate *forms* with locally defined functions *foo*. Globally defined functions of the same name are shadowed. Each *foo* is also the name of an implicit **block** around its corresponding *local-form\**. Only for **labels**, functions *foo* are visible inside *local-forms*. Return values of forms.

(<sup>so</sup>**function** {*foo* <sup>M</sup>**lambda** *form\**})  
▷ Return lexically innermost function named *foo* or a lexical closure of the <sup>M</sup>**lambda** expression.

(<sup>Fu</sup>**apply** {*function*  
(**setf** *function*)} *arg\* args*)  
▷ Values of *function* called with *args* and the list elements of *args*. **setfable** if *function* is one of <sup>Fu</sup>**aref**, <sup>Fu</sup>**bit**, and <sup>Fu</sup>**sbit**.

(<sup>Fu</sup>**funcall** *function* *arg\**) ▷ Values of *function* called with *args*.

(<sup>so</sup>**multiple-value-call** *function* *form\**)  
▷ Call *function* with all the values of each *form* as its arguments. Return values returned by function.

(<sup>Fu</sup>**values-list** *list*) ▷ Return elements of list.

(<sup>Fu</sup>**values** *foo\**)  
▷ Return as multiple values the primary values of the *foos*. **setfable**.

(<sup>Fu</sup>**multiple-value-list** *form*) ▷ List of the values of form.

(<sup>M</sup>**nth-value** *n* *form*)  
▷ Zero-indexed *nth* return value of *form*.

(<sup>Fu</sup>**complement** *function*)  
▷ Return new function with same arguments and same side effects as *function*, but with complementary truth value.

(<sup>Fu</sup>**constantly** *foo*)  
▷ Function of any number of arguments returning *foo*.

(<sup>Fu</sup>**identity** *foo*) ▷ Return *foo*.

(<sup>Fu</sup>**function-lambda-expression** *function*)  
▷ If available, return lambda expression of *function*, *NIL* if *function* was defined in an environment without bindings, and name of *function*.

(<sup>Fu</sup>**definition** {*foo*  
(**setf** *foo*)})  
▷ Definition of global function *foo*. **setfable**.

(<sup>Fu</sup>**fmakunbound** *foo*)  
▷ Remove global function or macro definition *foo*.

<sup>co</sup>**call-arguments-limit**  
<sup>co</sup>**lambda-parameters-limit**  
▷ Upper bound of the number of function arguments or lambda list parameters, respectively;  $\geq 50$ .

<sup>co</sup>**multiple-values-limit**  
▷ Upper bound of the number of values a multiple value can have;  $\geq 20$ .

## 9.4 Macros

Below, macro lambda list (*macro-λ\**) has the form of either

$([\&\text{whole } \text{var}] [E] \left\{ \begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \right\}^* [E]$

$([\&\text{optional} \left\{ \begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \right\} [\text{init}_{\text{NIL}} [\text{supplied-p}]]] [E])^* [E]$

$([\&\text{rest} \left\{ \begin{array}{c} \text{rest-var} \\ (\text{macro-}\lambda^*) \end{array} \right\}] [E])$

$([\&\text{body} \left\{ \begin{array}{c} \text{rest-var} \\ (\text{macro-}\lambda^*) \end{array} \right\}] [E])$

$([\&\text{key} \left\{ \begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \right\} \left\{ \begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \right\} [\text{init}_{\text{NIL}} [\text{supplied-p}]]] [E])^* [E]$

$([\&\text{allow-other-keys}] [\&\text{aux} \left\{ \begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \right\} [\text{init}_{\text{NIL}} [\text{supplied-p}]]] [E])$

or

$([\&\text{whole } \text{var}] [E] \left\{ \begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \right\}^* [E] [\&\text{optional} \left\{ \begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \right\} [\text{init}_{\text{NIL}} [\text{supplied-p}]]] [E] . \text{rest-var}).$

One toplevel  $[E]$  may be replaced by **&environment** *var*. *supplied-p* is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

$(\text{defmacro} \left\{ \begin{array}{c} \text{define-compiler-macro} \end{array} \right\} \left\{ \begin{array}{c} \text{foo} \\ (\text{setf } \text{foo}) \end{array} \right\} (\text{macro-}\lambda^*) (\text{declare } \widehat{\text{decl}}^* [\widehat{\text{doc}}] \text{form}^{\text{R}_k})$

▷ Define macro *foo* which on evaluation as (*foo tree*) applies expanded *forms* to arguments from *tree*, which corresponds to *tree*-shaped *macro-λ*s. *forms* are enclosed in an implicit **block** named *foo*.

$(\text{define-symbol-macro } \text{foo } \text{form})$

▷ Define symbol macro *foo* which on evaluation evaluates expanded *form*.

$(\text{macrolet } ((\text{foo } (\text{macro-}\lambda^*) (\text{declare } \widehat{\text{local-decl}}^*) [\widehat{\text{doc}}] \text{macro-form}^{\text{R}_k})) (\text{declare } \widehat{\text{decl}}^*) \text{form}^{\text{R}_k})$

▷ Evaluate *forms* with locally defined mutually invisible macros *foo* which are enclosed in implicit **blocks** of the same name.

$(\text{symbol-macrolet } ((\text{foo } \text{expansion-form}^*) (\text{declare } \widehat{\text{decl}}^*) \text{form}^{\text{R}_k}))$

▷ Evaluate *forms* with locally defined symbol macros *foo*.

$(\text{defsetf } \text{function} \left\{ \begin{array}{c} \text{updater } [\widehat{\text{doc}}] \\ (\text{setf-}\lambda^*) (s\text{-var}^*) (\text{declare } \widehat{\text{decl}}^*) [\widehat{\text{doc}}] \text{form}^{\text{R}_k} \end{array} \right\})$

where defsetf lambda list (*setf-λ\**) has the form (*var*\*

$[\&\text{optional} \left\{ \begin{array}{c} \text{var} \\ (\text{var } [\text{init}_{\text{NIL}} [\text{supplied-p}]]] \end{array} \right\}^*] [\&\text{rest } \text{var}]$

$[\&\text{key} \left\{ \begin{array}{c} \text{var} \\ (\text{key } \text{var}) \end{array} \right\} [\text{init}_{\text{NIL}} [\text{supplied-p}]]] [E])^* [E]$

$[\&\text{allow-other-keys}] [\&\text{environment } \text{var}]])$

▷ Specify how to **setf** a place accessed by *function*. **Short form:** (**setf** (*function arg\**) *value-form*) is replaced by (*updater arg\* value-form*); the latter must return *value-form*. **Long form:** on invocation of (**setf** (*function arg\**) *value-form*), *forms* must expand into code that sets the place accessed where *setf-λ* and *s-var\** describe the arguments of *function* and the value(s) to be stored, respectively; and that returns the value(s) of *s-var\**. *forms* are enclosed in an implicit **block** named *function*.

$(\text{define-setf-expander } \text{function } (\text{macro-}\lambda^*) (\text{declare } \widehat{\text{decl}}^*) [\widehat{\text{doc}}] \text{form}^{\text{R}_k})$

▷ Specify how to **setf** a place accessed by *function*. On invocation of (**setf** (*function arg\**) *value-form*), *form\** must expand into code returning *arg-vars*, *args*, *newval-vars*, *set-form*, and *get-form* as described with **get-setf-expansion** where the elements of macro lambda list *macro-λ\** are bound to corresponding *args*. *forms* are enclosed in an implicit **block** named *function*.

$(\text{pprint-logical-block } (\text{stream } \text{list } \left\{ \begin{array}{c} \text{:prefix } \text{string} \\ \text{:per-line-prefix } \text{string} \\ \text{:suffix } \text{string}_{\text{NIL}} \end{array} \right\}))$

$(\text{declare } \widehat{\text{decl}}^*) \text{form}^{\text{R}_k})$

▷ Evaluate *forms*, which should print *list*, with *stream* locally bound to a pretty printing stream which outputs to the original *stream*. If *list* is in fact not a list, it is printed by **write**. Return **NIL**.

$(\text{pprint-pop})$

▷ Take next element off *list*. If there is no remaining tail of *list*, or **\*print-length\*** or **\*print-circle\*** indicate printing should end, send element together with an appropriate indicator to *stream*.

$(\text{pprint-tab } \left\{ \begin{array}{c} \text{:line} \\ \text{:line-relative} \\ \text{:section} \\ \text{:section-relative} \end{array} \right\} c \text{ } i \text{ } [\text{stream } \text{standard-output}_{\text{var}}])$

▷ Move cursor forward to column number  $c + ki$ ,  $k \geq 0$  being as small as possible.

$(\text{pprint-indent } \left\{ \begin{array}{c} \text{:block} \\ \text{:current} \end{array} \right\} n \text{ } [\text{stream } \text{standard-output}_{\text{var}}])$

▷ Specify indentation for innermost logical block relative to leftmost position/to current position. Return **NIL**.

$(\text{pprint-exit-if-list-exhausted})$

▷ If *list* is empty, terminate logical block. Return **NIL** otherwise.

$(\text{pprint-newline } \left\{ \begin{array}{c} \text{:linear} \\ \text{:fill} \\ \text{:miser} \\ \text{:mandatory} \end{array} \right\} [\text{stream } \text{standard-output}_{\text{var}}])$

▷ Print a conditional newline if *stream* is a pretty printing stream. Return **NIL**.

**\*print-array\*** ▷ If T, print arrays **readably**.

**\*print-base\***<sub>NIL</sub> ▷ Radix for printing rationals, from 2 to 36.

**\*print-case\***<sub>upcase</sub> ▷ Print symbol names all uppercase (**:upcase**), all lowercase (**:downcase**), capitalized (**:capitalize**).

**\*print-circle\***<sub>NIL</sub> ▷ If T, avoid indefinite recursion while printing circular structure.

**\*print-escape\***<sub>␣</sub> ▷ If **NIL**, do not print escape characters and package prefixes.

**\*print-gensym\***<sub>␣</sub> ▷ If T, print **#:** before uninterned symbols.

**\*print-length\***<sub>NIL</sub> ▷ If integer, restrict printing of objects to that number of elements per level/to that depth/to that number of lines.

**\*print-miser-width\*** ▷ If integer and greater than the width available for printing a substructure, switch to the more compact miser style.

**\*print-pretty\*** ▷ If T, print pretty.

**\*print-radix\***<sub>NIL</sub> ▷ If T, print rationals with a radix indicator.

**\*print-readably\***<sub>NIL</sub> ▷ If T, print **readably** or signal error **print-not-readable**.

**\*print-right-margin\***<sub>NIL</sub> ▷ Right margin width in ems while pretty-printing.

## 13.4 Printer

$\left\{ \begin{array}{l} \text{prin1} \\ \text{print} \\ \text{pprint} \\ \text{princ} \end{array} \right\} \text{foo } [\widetilde{\text{stream}}_{\text{var}}^{\text{var}} \text{ *standard-output*}]$

▷ Print *foo* to *stream* <sup>Fu</sup>readably, <sup>Fu</sup>readably between a newline and a space, <sup>Fu</sup>readably after a newline, or human-readably without any extra characters, respectively. <sup>Fu</sup>prin1, <sup>Fu</sup>print and <sup>Fu</sup>princ return foo.

$\text{princ-to-string } \text{foo}$

$\text{princ-to-string } \text{foo}$

▷ Print *foo* to string <sup>Fu</sup>readably or human-readably, respectively.

$\text{print-object } \text{object } \widetilde{\text{stream}}$

▷ Print *object* to *stream*. Called by the Lisp printer.

$\text{print-unreadable-object } (\text{foo } \widetilde{\text{stream}} \left\{ \begin{array}{l} \text{:type } \text{bool}_{\text{NIL}} \\ \text{:identity } \text{bool}_{\text{NIL}} \end{array} \right\} \text{form}^{\text{P}_*})$

▷ Enclosed in #< and >, print *foo* by means of *forms* to *stream*. Return NIL.

$\text{terpri } [\widetilde{\text{stream}}_{\text{var}}^{\text{var}} \text{ *standard-output*}]$

▷ Output a newline to *stream*. Return NIL.

$\text{fresh-line } [\widetilde{\text{stream}}_{\text{var}}^{\text{var}} \text{ *standard-output*}]$

▷ Output a newline to *stream* and return T unless *stream* is already at the start of a line.

$\text{write-char } \text{char } [\widetilde{\text{stream}}_{\text{var}}^{\text{var}} \text{ *standard-output*}]$

▷ Output *char* to *stream*.

$\left\{ \begin{array}{l} \text{write-string} \\ \text{write-line} \end{array} \right\} \text{string } [\widetilde{\text{stream}}_{\text{var}}^{\text{var}} \text{ *standard-output*}] \left\{ \begin{array}{l} \text{:start } \text{start}_{\text{Q}} \\ \text{:end } \text{end}_{\text{NIL}} \end{array} \right\}$

▷ Write *string* to *stream* without/with a trailing newline.

$\text{write-byte } \text{byte } \widetilde{\text{stream}}$

▷ Write *byte* to binary *stream*.

$\text{write-sequence } \text{sequence } \widetilde{\text{stream}} \left\{ \begin{array}{l} \text{:start } \text{start}_{\text{Q}} \\ \text{:end } \text{end}_{\text{NIL}} \end{array} \right\}$

▷ Write elements of *sequence* to binary or character *stream*.

$\left\{ \begin{array}{l} \text{write} \\ \text{write-to-string} \end{array} \right\} \text{foo } \left\{ \begin{array}{l} \text{:array } \text{bool} \\ \text{:base } \text{radix} \\ \text{:case } \left\{ \begin{array}{l} \text{:upcase} \\ \text{:downcase} \\ \text{:capitalize} \end{array} \right\} \\ \text{:circle } \text{bool} \\ \text{:escape } \text{bool} \\ \text{:gensym } \text{bool} \\ \text{:length } \{ \text{int}_{\text{NIL}} \} \\ \text{:level } \{ \text{int}_{\text{NIL}} \} \\ \text{:lines } \{ \text{int}_{\text{NIL}} \} \\ \text{:miser-width } \{ \text{int}_{\text{NIL}} \} \\ \text{:pprint-dispatch } \text{dispatch-table} \\ \text{:pretty } \text{bool} \\ \text{:radix } \text{bool} \\ \text{:readably } \text{bool} \\ \text{:right-margin } \{ \text{int}_{\text{NIL}} \} \\ \text{:stream } \text{stream}_{\text{var}}^{\text{var}} \text{ *standard-output*} \end{array} \right\}$

▷ Print *foo* to *stream* and return foo, or print *foo* into string, respectively, after dynamically setting printer variables corresponding to keyword parameters (<sup>Fu</sup>\*print-bar\* becoming *:bar*). (*:stream* keyword with <sup>Fu</sup>write only.)

$\text{pprint-fill } \text{stream } \text{foo } [\text{parenthesis}_{\text{Q}} \text{ [noop]}]$

$\text{pprint-tabular } \text{stream } \text{foo } [\text{parenthesis}_{\text{Q}} \text{ [noop } [n_{\text{Q}}]]]$

$\text{pprint-linear } \text{stream } \text{foo } [\text{parenthesis}_{\text{Q}} \text{ [noop]}]$

▷ Print *foo* to *stream*. If *foo* is a list, print as many elements per line as possible; do the same in a table with a column width of *n* ems; or print either all elements on one line or each on its own line, respectively. Return NIL. Usable with <sup>Fu</sup>format directive ~//.

$\text{(get-setf-expansion } \text{place } [\text{environment}_{\text{NIL}}])$

▷ Return lists of temporary variables *arg-vars* and of corresponding *args* as given with *place*, list *newval-vars* with temporary variables corresponding to the new values, and *set-form* and *get-form* specifying in terms of *arg-vars* and *newval-vars* how to **setf** and how to read *place*.

$\text{(define-modify-macro } \text{foo } ([\&\text{optional}$

$\left\{ \begin{array}{l} \text{var} \\ (\text{var } [\text{init}_{\text{NIL}}] [\text{supplied-p}]) \end{array} \right\}^* [\&\text{rest } \text{var}] \text{function } [\widehat{\text{doc}}])$

▷ Define macro *foo* able to modify a place. On invocation of (*foo place arg\**), the value of *function* applied to *place* and *args* will be stored into *place* and returned.

<sup>co</sup>lambda-list-keywords

▷ List of macro lambda list keywords. These are at least:

**&whole** *var*

▷ Bind *var* to the entire macro call form.

**&optional** *var\**

▷ Bind *vars* to corresponding arguments if any.

**{&rest|&body}** *var*

▷ Bind *var* to a list of remaining arguments.

**&key** *var\**

▷ Bind *vars* to corresponding keyword arguments.

**&allow-other-keys**

▷ Suppress keyword argument checking. Callers can do so using **:allow-other-keys** T.

**&environment** *var*

▷ Bind *var* to the lexical compilation environment.

**&aux** *var\**

▷ Bind *vars* as in <sup>so</sup>let\*.

## 9.5 Control Flow

$\text{(if } \text{test } \text{then } [\text{else}_{\text{NIL}}])$

▷ Return values of *then* if *test* returns T; return values of *else* otherwise.

$\text{(cond } (\text{test } \text{then}^{\text{P}_*} [\text{else}_{\text{NIL}}])^*)$

▷ Return the values of the first *then\** whose *test* returns T; return NIL if all *tests* return NIL.

$\left\{ \begin{array}{l} \text{when}^{\text{M}} \\ \text{unless}^{\text{M}} \end{array} \right\} \text{test } \text{foo}^{\text{P}_*}$

▷ Evaluate *foos* and return their values if *test* returns T or NIL, respectively. Return NIL otherwise.

$\text{(case } \text{test } (\left\{ \begin{array}{l} \text{key}^* \end{array} \right\} \text{foo}^{\text{P}_*})^* [(\left\{ \begin{array}{l} \text{otherwise} \end{array} \right\} \text{bar}^{\text{P}_*})_{\text{NIL}}])$

▷ Return the values of the first *foo\** one of whose *keys* is *test*. Return values of *bars* if there is no matching *key*.

$\left\{ \begin{array}{l} \text{ecase}^{\text{M}} \\ \text{ccase}^{\text{M}} \end{array} \right\} \text{test } (\left\{ \begin{array}{l} \text{key}^* \end{array} \right\} \text{foo}^{\text{P}_*})^*$

▷ Return the values of the first *foo\** one of whose *keys* is *test*. Signal non-correctable/correctable **type-error** and return NIL if there is no matching *key*.

$\text{(and } \text{form}^{\text{M}}_{\text{Q}})$

▷ Evaluate *forms* from left to right. Immediately return NIL if one *form*'s value is NIL. Return values of last form otherwise.

$\text{(or } \text{form}^{\text{M}}_{\text{NIL}})$

▷ Evaluate *forms* from left to right. Immediately return primary value of first non-NIL-evaluating form, or all values if last *form* is reached. Return NIL if no *form* returns T.

$\text{(progn } \text{form}^{\text{so}}_{\text{NIL}})$

▷ Evaluate *forms* sequentially. Return values of last form.

(<sup>so</sup>**multiple-value-prog1** *form-r form\**)

(<sup>M</sup>**prog1** *form-r form\**)

(<sup>M</sup>**prog2** *form-a form-r form\**)

▷ Evaluate forms in order. Return values/primary value, respectively, of *form-r*.

(<sup>fo</sup>**let**\*) {(<sup>fo</sup>**let**\*)} {(<sup>fo</sup>**let**\*)} {(<sup>fo</sup>**let**\*)} (declare  $\widehat{decl}^*$ ) *form<sup>P</sup>\**)

▷ Evaluate *forms* with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return values of forms.

(<sup>M</sup>**prog**\*) {(<sup>M</sup>**prog**\*)} {(<sup>M</sup>**prog**\*)} (declare  $\widehat{decl}^*$ ) {*tag form*}\*

▷ Evaluate *forms* with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return NIL or explicitly returned values. Implicitly, the whole form is a **block** named NIL.

(<sup>so</sup>**progv** *symbols values form<sup>P</sup>\**)

▷ Evaluate *forms* with locally established dynamic bindings of *symbols* to *values* or NIL. Return values of forms.

(<sup>so</sup>**unwind-protect** *protected cleanup\**)

▷ Evaluate *protected* and then, no matter how control leaves *protected*, *cleanups*. Return values of protected.

(<sup>M</sup>**destructuring-bind** *destruct-λ bar (declare  $\widehat{decl}^*$ ) form<sup>P</sup>\**)

▷ Evaluate *forms* with variables from tree *destruct-λ* bound to corresponding elements of tree *bar*, and return their values. *destruct-λ* resembles *macro-λ* (section 9.4), but without any **&environment** clause.

(<sup>M</sup>**multiple-value-bind** ( $\widehat{var}^*$ ) *values-form (declare  $\widehat{decl}^*$ ) body-form<sup>P</sup>\**)

▷ Evaluate *body-forms* with *vars* lexically bound to the return values of *values-form*. Return values of body-forms.

(<sup>so</sup>**block** *name form<sup>P</sup>\**)

▷ Evaluate *forms* in a lexical environment, and return their values unless interrupted by <sup>so</sup>**return-from**.

(<sup>so</sup>**return-from** *foo [result<sub>NIL</sub>]*)

(<sup>M</sup>**return** [*result<sub>NIL</sub>*])

▷ Have nearest enclosing **block** named *foo*/named NIL, respectively, return with values of *result*.

(<sup>so</sup>**tagbody** {*tag form*}\*)

▷ Evaluate *forms* in a lexical environment. *tags* (symbols or integers) have lexical scope and dynamic extent, and are targets for **go**. Return NIL.

(<sup>so</sup>**go** *tag*)

▷ Within the innermost possible enclosing <sup>so</sup>**tagbody**, jump to a tag *eq* *tag*.

(<sup>so</sup>**catch** *tag form<sup>P</sup>\**)

▷ Evaluate *forms* and return their values unless interrupted by <sup>so</sup>**throw**.

(<sup>so</sup>**throw** *tag form*)

▷ Have the nearest dynamically enclosing <sup>so</sup>**catch** with a tag *eq* *tag* return with the values of *form*.

(<sup>Fu</sup>**sleep** *n*) ▷ Wait *n* seconds, return NIL.

## 9.6 Iteration

(<sup>do</sup>**do**\*) {(<sup>do</sup>**do**\*)} {(<sup>do</sup>**do**\*)} {(<sup>do</sup>**do**\*)} (stop *result<sup>P</sup>\**) (declare  $\widehat{decl}^*$ )

▷ Evaluate **tagbody**-like body with *vars* successively bound according to the values of the corresponding *start* and *step* forms. *vars* are bound in parallel/sequentially, respectively. Stop iteration when *stop* is T. Return values of result\*. Implicitly, the whole form is a **block** named NIL.

## 13.3 Character Syntax

#| *multi-line-comment\** |#

; *one-line-comment\**

▷ Comments. There are stylistic conventions:

;;; *title*

▷ Short title for a block of code.

;; *intro*

▷ Description before a block of code.

;; *state*

▷ State of program or of following code.

; *explanation*

; *continuation*

▷ Regarding line on which it appears.

(*foo*\*[. *bar<sub>NIL</sub>*]) ▷ List of *foos* with the terminating *cdr bar*.

"

▷ Begin and end of a string.

'*foo*

▷ (<sup>so</sup>**quote** *foo*); *foo* unevaluated.

`([*foo*] [*bar*] [*@baz*] [*.quux*] [*bing*])

▷ Backquote. <sup>so</sup>**quote** *foo* and *bing*; evaluate *bar* and splice the lists *baz* and *quux* into their elements. When nested, outermost commas inside the innermost backquote expression belong to this backquote.

#\ *c*

▷ (<sup>Fu</sup>**character** "*c*"), the character *c*.

#B*n*; #O*n*; *n*.; #X*n*; #rR*n*

▷ Integer of radix 2, 8, 10, 16, or *r*;  $2 \leq r \leq 36$ .

*n/d*

▷ The **ratio**  $\frac{n}{d}$ .

{ [*m*].*n* [{S|F|D|L|E}<sub>x<sub>EQ</sub></sub>] [*m*].[*n*] {S|F|D|L|E}<sub>x</sub> }

▷ *m.n* · 10<sup>*x*</sup> as **short-float**, **single-float**, **double-float**, **long-float**, or the type from **\*read-default-float-format\***.

#C(*a b*)

▷ (<sup>Fu</sup>**complex** *a b*), the complex number *a* + *bi*.

#'*foo*

▷ (<sup>so</sup>**function** *foo*); the function named *foo*.

#*nA*sequence

▷ *n*-dimensional array.

#[*n*](*foo*\*)

▷ Vector of some (or *n*) *foos* filled with last *foo* if necessary.

#[*n*]\**b*\*

▷ Bit vector of some (or *n*) *bs* filled with last *b* if necessary.

#S(*type* {*slot value*}\*)

▷ Structure of *type*.

#Pstring

▷ A pathname.

#:*foo*

▷ Unintended symbol *foo*.

#.*form*

▷ Read-time value of *form*.

\*<sup>var</sup>**read-eval\***<sub>EQ</sub>

▷ If NIL, a **reader-error** is signalled at #.

#integer= *foo*

▷ Give *foo* the label *integer*.

#integer#

▷ Object labelled *integer*.

#<

▷ Have the reader signal **reader-error**.

#+*feature when-feature*

#-*feature unless-feature*

▷ Means *when-feature* if *feature* is T; means *unless-feature* if *feature* is NIL. *feature* is a symbol from **\*features\***, or ({**and**|**or**} *feature*\*), or (**not** *feature*).

\*<sup>var</sup>**features\***

▷ List of symbols denoting implementation-dependent features.

|*c*\*|; \ *c*

▷ Treat arbitrary character(s) *c* as alphabetic preserving case.

(<sup>Fu</sup>**read-delimited-list** *char* [*stream* <sup>var</sup>**\*standard-input\*** [*recursive* **T**]])  
 ▷ Continue reading until encountering *char*. Return list of objects read. Signal error if no *char* is found in stream.

(<sup>Fu</sup>**read-char** [*stream* <sup>var</sup>**\*standard-input\*** [*eof-err* **T**] [*eof-val* **NIL**] [*recursive* **T**]])  
 ▷ Return next character from *stream*.

(<sup>Fu</sup>**read-char-no-hang** [*stream* <sup>var</sup>**\*standard-input\*** [*eof-error* **T**] [*eof-val* **NIL**] [*recursive* **T**]])  
 ▷ Next character from *stream* or **NIL** if none is available.

(<sup>Fu</sup>**peek-char** [*mode* **NIL**] [*stream* <sup>var</sup>**\*standard-input\*** [*eof-error* **T**] [*eof-val* **NIL**] [*recursive* **T**]])  
 ▷ Next, or if *mode* is **T**, next non-whitespace character, or if *mode* is a character, next instance of it, from *stream* without removing it there.

(<sup>Fu</sup>**unread-char** *character* [*stream* <sup>var</sup>**\*standard-input\***])  
 ▷ Put last <sup>Fu</sup>**read-char**ed *character* back into *stream*; return **NIL**.

(<sup>Fu</sup>**read-byte** *stream* [*eof-err* **T**] [*eof-val* **NIL**])  
 ▷ Read next byte from binary *stream*.

(<sup>Fu</sup>**read-line** [*stream* <sup>var</sup>**\*standard-input\*** [*eof-err* **T**] [*eof-val* **NIL**] [*recursive* **T**]])  
 ▷ Return a line of text from *stream* and **T** if line has been ended by end of file.

(<sup>Fu</sup>**read-sequence** *sequence* *stream* [:*start* *start* **0**] [:*end* *end* **NIL**])  
 ▷ Replace elements of *sequence* between *start* and *end* with elements from binary or character *stream*. Return index of *sequence*'s first unmodified element.

(<sup>Fu</sup>**readtable-case** *readtable*)<sup>upcase</sup>  
 ▷ Case sensitivity attribute (one of **:upcase**, **:downcase**, **:preserve**, **:invert**) of *readtable*. **settable**.

(<sup>Fu</sup>**copy-readtable** [*from-readtable* <sup>var</sup>**\*readtable\*** [*to-readtable* **NIL**]])  
 ▷ Return copy of *from-readtable*.

(<sup>Fu</sup>**set-syntax-from-char** *to-char* *from-char* [*to-readtable* <sup>var</sup>**\*readtable\*** [*from-readtable* **standard-readtable**]])  
 ▷ Copy syntax of *from-char* to *to-readtable*. Return **T**.

<sup>var</sup>**\*readtable\*** ▷ Current readtable.

<sup>var</sup>**\*read-base\***<sup>T</sup> ▷ Radix for reading **integers** and **ratios**.

<sup>var</sup>**\*read-default-float-format\***<sup>single-float</sup>  
 ▷ Floating point format to use when not indicated in the number read.

<sup>var</sup>**\*read-suppress\*****NIL**  
 ▷ If **T**, reader is syntactically more tolerant.

(<sup>Fu</sup>**set-macro-character** *char* *function* [*non-term-p* **NIL**] [*rt* <sup>var</sup>**\*readtable\***])  
 ▷ Make *char* a macro character associated with *function* of stream and *char*. Return **T**.

(<sup>Fu</sup>**get-macro-character** *char* [*rt* <sup>var</sup>**\*readtable\***])  
 ▷ Reader macro function associated with *char*, and **T** if *char* is a non-terminating macro character.

(<sup>Fu</sup>**make-dispatch-macro-character** *char* [*non-term-p* **NIL**] [*rt* <sup>var</sup>**\*readtable\***])  
 ▷ Make *char* a dispatching macro character. Return **T**.

(<sup>Fu</sup>**set-dispatch-macro-character** *char* *sub-char* *function* [*rt* <sup>var</sup>**\*readtable\***])  
 ▷ Make *function* of stream, *n*, *sub-char* a dispatch function of *char* followed by *n*, followed by *sub-char*. Return **T**.

(<sup>Fu</sup>**get-dispatch-macro-character** *char* *sub-char* [*rt* <sup>var</sup>**\*readtable\***])  
 ▷ Dispatch function associated with *char* followed by *sub-char*.

(<sup>M</sup>**dotimes** (*var* *i* [*result* **0**]) (**declare** *decl*\*)\* {*tag*|*form*})  
 ▷ Evaluate **tagbody**-like body with *var* successively bound to integers from 0 to *i* - 1. Upon evaluation of *result*, *var* is *i*. Implicitly, the whole form is a **block** named **NIL**.

(<sup>M</sup>**dolist** (*var* *list* [*result* **NIL**]) (**declare** *decl*\*)\* {*tag*|*form*})  
 ▷ Evaluate **tagbody**-like body with *var* successively bound to the elements of *list*. Upon evaluation of *result*, *var* is **NIL**. Implicitly, the whole form is a **block** named **NIL**.

## 9.7 Loop Facility

(<sup>M</sup>**loop** *form*\*)  
 ▷ **Simple Loop**. If *forms* do not contain any atomic Loop Facility keywords, evaluate them forever in an implicit **block** named **NIL**.

(<sup>M</sup>**loop** *clause*\*)  
 ▷ **Loop Facility**. For Loop Facility keywords see below and Figure 1.

**named** *n*<sup>NIL</sup> ▷ Give <sup>M</sup>**loop**'s implicit **block** a name.

{**with** {*var-s* (*var-s*\*)} [*d-type*] = *foo*}<sup>+</sup>  
 {**and** {*var-p* (*var-p*\*)} [*d-type*] = *bar*}<sup>\*</sup>

where destructuring type specifier *d-type* has the form

{**fixnum**|**float**|**T**|**NIL**}{**of-type** {*type* (*type*\*)}}

▷ Initialize (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel.

{**for**|**as**} {*var-s* (*var-s*\*)} [*d-type*]<sup>+</sup> {**and** {*var-p* (*var-p*\*)} [*d-type*]}<sup>\*</sup>  
 ▷ Begin of iteration control clauses. Initialize and step (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel. Destructuring type specifier *d-type* as with **with**.

{**upfrom**|**from**|**downfrom**} *start*  
 ▷ Start stepping with *start*

{**upto**|**downto**|**to**|**below**|**above**} *form*  
 ▷ Specify *form* as the end value for stepping.

{**in**|**on**} *list*  
 ▷ Bind *var* to successive elements/tails, respectively, of *list*.

**by** {*step* **1**}|*function* *#'cdr*  
 ▷ Specify the (positive) decrement or increment or the *function* of one argument returning the next part of the list.

= *foo* [**then** *bar* *foo*]  
 ▷ Bind *var* initially to *foo* and later to *bar*.

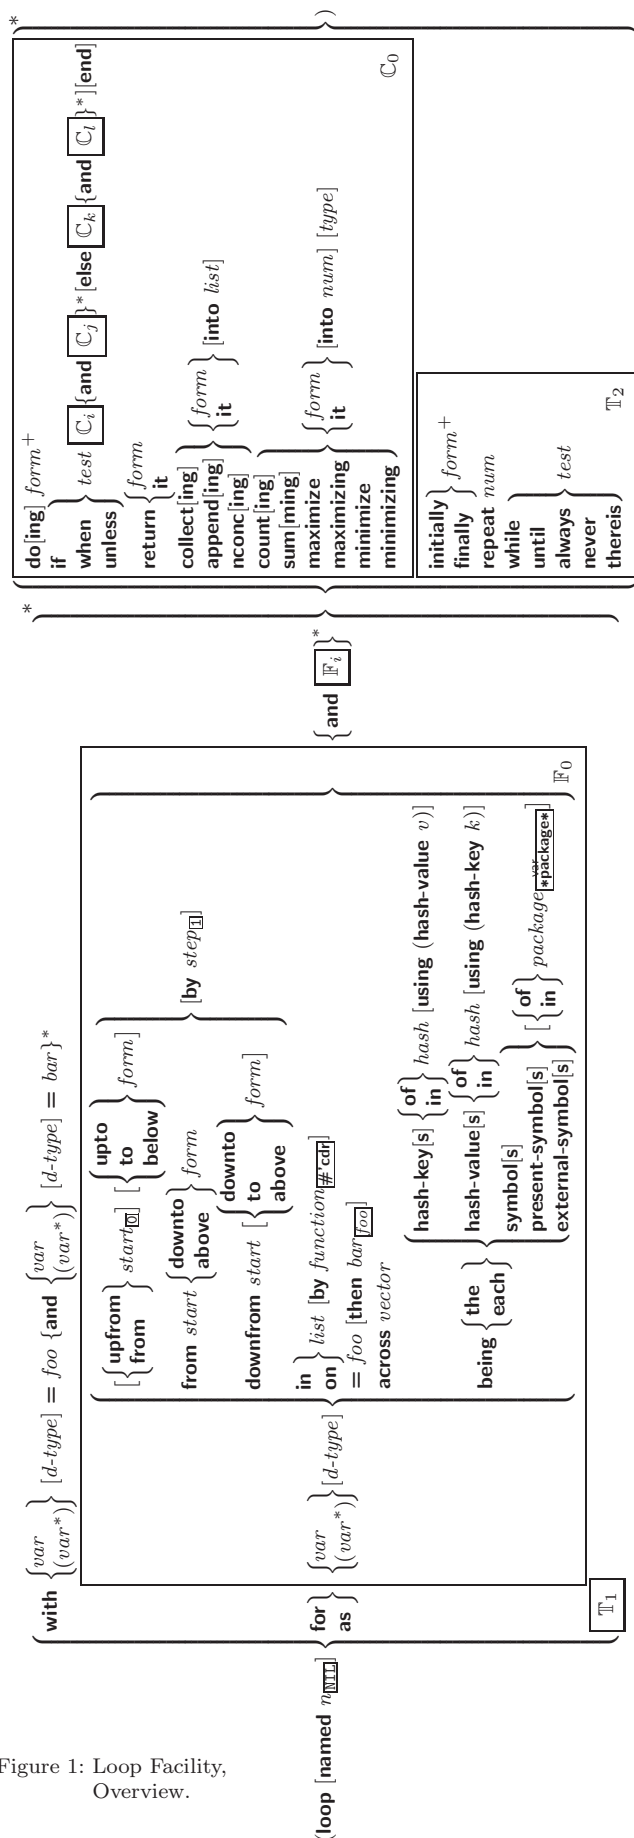

**across** *vector*  
 ▷ Bind *var* to successive elements of *vector*.

**being** {**the**|**each**}  
 ▷ Iterate over a hash table or a package.

{**hash-key**|**hash-keys**} {**of**|**in**} *hash-table* [**using** (**hash-value** *value*)]  
 ▷ Bind *var* successively to the keys of *hash-table*; bind *value* to corresponding values.

{**hash-value**|**hash-values**} {**of**|**in**} *hash-table* [**using** (**hash-key** *key*)]  
 ▷ Bind *var* successively to the values of *hash-table*; bind *key* to corresponding keys.

{**symbol**|**symbols**|**present-symbol**|**present-symbols**|**external-symbol**|**external-symbols**} {**of**|**in**} *package* <sup>var</sup>**\*package\***  
 ▷ Bind *var* successively to the accessible symbols, or the present symbols, or the external symbols respectively, of *package*.

(<sup>Fu</sup>**upgraded-array-element-type** *type* [*environment* 
 ▷ Element type of most specialized array capable of holding  
 elements of *type*.

(**eq** *foo*)  
(**member** *foo*\*)    ▷ Specifier for a type comprising *foo* or *foos*.

(**satisfies** *predicate*)  
 ▷ Type specifier for all objects satisfying *predicate*.

**(mod  $n$ )**   ▷ Type specifier for all non-negative integers  $< n$ .

(**not** *type*)      ▷ Complement of type.

(**and**  $type^*_{\mathbb{T}}$ )     $\triangleright$  Type specifier for intersection of *types*.

(**or** *type*<sup>\*</sup>NTI)    ▷ Type specifier for union of *types*.

(values *type*\* [**&optional** *type*\* [**&rest** *other-args*]])  
 ▷ Type specifier for multiple values.

- \* ▷ As a type argument (cf. Figure 2): no restriction.

### 13.1 Predicates

$\text{Fu}$   
 $(\text{streamp } foo)$   
 $\text{Fu}$   
 $(\text{pathnamep } foo)$   $\triangleright \text{T}$  if  $foo$  is of indicated type.  
 $\text{Fu}$   
 $(\text{readtablep } foo)$

$(\overset{\text{Fu}}{\text{input-stream-p}} \text{ stream})$   
 $(\overset{\text{Fu}}{\text{output-stream-p}} \text{ stream})$   
 $(\overset{\text{Fu}}{\text{interactive-stream-p}} \text{ stream})$   
 $(\overset{\text{Fu}}{\text{open-stream-p}} \text{ stream})$   
 ▷ Return T if *stream* is for input, for output, interactive, or open, respectively.

(<sup>Fu</sup>**pathname-match-p** *path wildcard*)  
 ▷ T if *path* matches *wildcard*.

( $\text{F}_u$  **wild-pathname-p** *path* [{:host|:device|:directory|:name|:type|:version|NIL}])

▷ Return T if indicated component in *path* is wildcard. (NIL indicates any component.)

$\left( \left\{ \begin{array}{l} \mathbf{y\text{-}or\text{-}n\text{-}p} \\ \mathbf{y_{Fu}\text{-}or\text{-}n\text{-}p} \\ \mathbf{yes\text{-}or\text{-}no\text{-}p} \end{array} \right\} [control\ arg^*] \right)$   
 $\triangleright$  Ask user a question and return T or NIL depending on their answer. See p. 36,  $\mathbf{y_{Fu}\text{-}or\text{-}n\text{-}p}$ , for *control* and *args*.

(<sup>M</sup>**with-standard-io-syntax** *form*<sup>P\*</sup>)  
 ▷ Evaluate *forms* with standard behaviour of reader and printer. Return values of *forms*.

$\left\{ \begin{array}{l} \text{read}_{Fu} \\ \text{read-preserving-whitespace} \end{array} \right\} [\widetilde{\text{stream}}_{\text{var}} \text{standard-input*} [\text{eof-error}_{\text{err}}]]$   
 $[\text{eof-value}_{\text{err}} [\text{recursive}_{\text{err}}]]])$   
 ▷ Read printed representation of object.

---

31

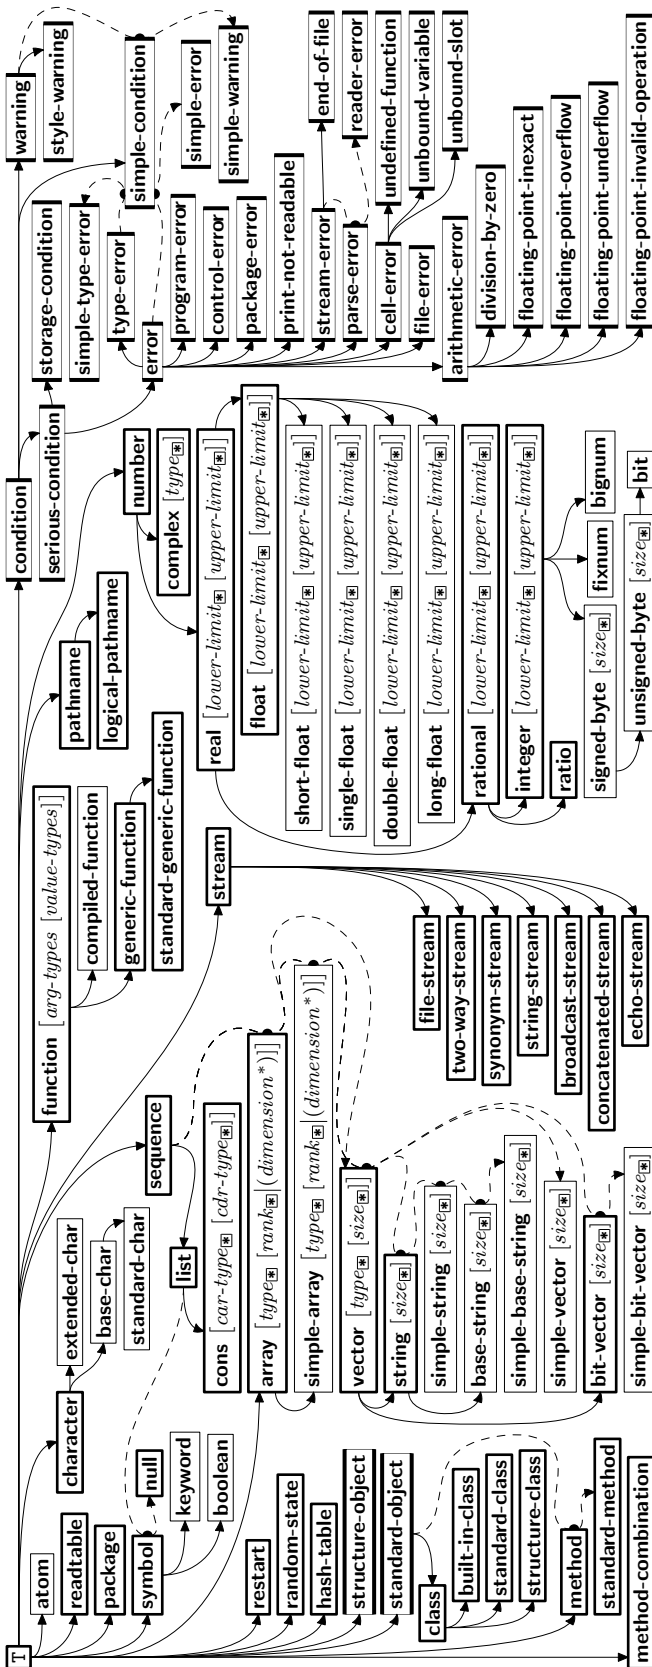

Figure 2: Precedence Order of System Classes ( $\square$ ), Classes ( $\equiv$ ), Types ( $\square$ ), and Condition Types ( $\square$ ).

$\{\text{do|doing}\} \text{form}^+$

▷ Evaluate *forms* in every iteration.

$\{\text{if|when|unless}\} \text{test } i\text{-clause } \{\text{and } j\text{-clause}\}^* [\text{else } k\text{-clause } \{\text{and } l\text{-clause}\}^*] [\text{end}]$   
 ▷ If *test* returns T, T, or NIL, respectively, evaluate *i-clause* and *j-clauses*; otherwise, evaluate *k-clause* and *l-clauses*.

**it** ▷ Inside *i-clause* or *k-clause*: value of *test*.

**return**  $\{\text{form|it}\}$

▷ Return immediately, skipping any **finally** parts, with values of *form* or **it**.

$\{\text{collect|collecting}\} \{\text{form|it}\} [\text{into } \textit{list}]$

▷ Collect values of *form* or **it** into *list*. If no *list* is given, collect into an anonymous list which is returned after termination.

$\{\text{append|appending|nconc|nconcing}\} \{\text{form|it}\} [\text{into } \textit{list}]$

▷ Concatenate values of *form* or **it**, which should be lists, into *list* by the means of **append** or **nconc**, respectively. If no *list* is given, collect into an anonymous list which is returned after termination.

$\{\text{count|counting}\} \{\text{form|it}\} [\text{into } n] [\text{type}]$

▷ Count the number of times the value of *form* or of **it** is T. If no *n* is given, count into an anonymous variable which is returned after termination.

$\{\text{sum|summing}\} \{\text{form|it}\} [\text{into } \textit{sum}] [\text{type}]$

▷ Calculate the sum of the primary values of *form* or of **it**. If no *sum* is given, sum into an anonymous variable which is returned after termination.

$\{\text{maximize|maximizing|minimize|minimizing}\} \{\text{form|it}\} [\text{into } \textit{max-min}] [\text{type}]$

▷ Determine the maximum or minimum, respectively, of the primary values of *form* or of **it**. If no *max-min* is given, use an anonymous variable which is returned after termination.

$\{\text{initially|finally}\} \text{form}^+$

▷ Evaluate *forms* before begin, or after end, respectively, of iterations.

**repeat** *num*

▷ Terminate **loop** after *num* iterations; *num* is evaluated once.

$\{\text{while|until}\} \text{test}$

▷ Continue iteration until *test* returns NIL or T, respectively.

$\{\text{always|never}\} \text{test}$

▷ Terminate **loop** returning NIL and skipping any **finally** parts as soon as *test* is NIL or T, respectively. Otherwise continue **loop** with its default return value set to T.

**thereis** *test*

▷ Terminate **loop** when *test* is T and return value of *test*, skipping any **finally** parts. Otherwise continue **loop** with its default return value set to NIL.

$(\text{loop-finish})$

▷ Terminate **loop** immediately executing any **finally** clauses and returning any accumulated results.

## 10 CLOS

### 10.1 Classes

$(\text{slot-exists-p } \textit{foo} \textit{bar})$  ▷  $\underline{T}$  if *foo* has a slot *bar*.

$(\text{slot-boundp } \textit{instance} \textit{slot})$  ▷  $\underline{T}$  if *slot* in *instance* is bound.

$(\text{defclass } \textit{foo} (\textit{superclass}^* \textit{standard-object}))$

$$\left( \begin{array}{l} \text{slot} \\ \left( \begin{array}{l} \{ \text{:reader } \text{reader} \}^* \\ \{ \text{:writer } \left\{ \begin{array}{l} \text{writer} \\ \text{(setf writer)} \end{array} \} \}^* \\ \{ \text{:accessor } \text{accessor} \}^* \\ \{ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \text{:class} \end{array} \right\} \text{instance} \} \\ \{ \text{:initarg } \text{:initarg-name} \}^* \\ \text{:initform } \text{form} \\ \text{:type } \text{type} \\ \text{:documentation } \text{slot-doc} \end{array} \right) \end{array} \right)^* \\ \left( \begin{array}{l} \text{:default-initargs } \{ \text{name value} \}^* \\ \text{:documentation } \text{class-doc} \\ \text{:metaclass } \text{name} \text{standard-class} \end{array} \right) \end{array} \right)$$

▷ Define, as a subclass of *superclasses*, class *foo*. In a new instance *i*, a *slot*'s value defaults to *form* unless set via *:initarg-name*; it is readable via (*reader i*) or (*accessor i*), and writeable via (*writer i value*) or (**setf** (*accessor i value*)). With **:allocation :class**, *slot* is shared by all instances of class *foo*.

(<sup>Fu</sup>**find-class** *symbol* [*errorp*] [*environment*])  
▷ Return class named *symbol*. **setfable**.

(<sup>F</sup>**make-instance** *class* {*:initarg value*}\* *other-keyarg*\*)  
▷ Make new instance of *class*.

(<sup>F</sup>**reinitialize-instance** *instance* {*:initarg value*}\* *other-keyarg*\*)  
▷ Change local slots of *instance* according to *initargs*.

(<sup>Fu</sup>**slot-value** *foo slot*) ▷ Return value of *slot* in *foo*. **setfable**.

(<sup>Fu</sup>**slot-makunbound** *instance slot*)  
▷ Make *slot* in *instance* unbound.

$\left( \begin{array}{l} \{ \text{with-slots } (\widehat{\text{slot}} | \widehat{(\text{var slot})}^*) \\ \text{with-accessors } (\widehat{(\text{var accessor})}^*) \end{array} \right) \text{instance } (\text{declare } \widehat{\text{decl}}^*)^* \text{form}^*_{\text{I}}$   
▷ Return values of *forms* after evaluating them in a lexical environment with slots of *instance* visible as **setfable slots** or *vars*/with *accessors* of *instance* visible as **setfable vars**.

(<sup>F</sup>**class-name** *class*)  
(<sup>F</sup>**setf class-name** *new-name class*) ▷ Get/set name of *class*.

(<sup>Fu</sup>**class-of** *foo*) ▷ *Class foo* is a direct instance of.

(<sup>F</sup>**change-class** *instance new-class* {*:initarg value*}\* *other-keyarg*\*)  
▷ Change class of *instance* to *new-class*.

(<sup>F</sup>**make-instances-obsolete** *class*)  
▷ Update instances of *class*.

$\left( \begin{array}{l} \{ \text{initialize-instance } (\text{instance}) \\ \text{update-instance-for-different-class } \text{previous current} \end{array} \right) \{ \text{:initarg value} \}^* \text{other-keyarg}^* \}$   
▷ Its primary method sets slots on behalf of **make-instance**/of **change-class** by means of **shared-initialize**.

(<sup>F</sup>**update-instance-for-redefined-class** *instances added-slots discarded-slots property-list* {*:initarg value*}\* *other-keyarg*\*)  
▷ Its primary method sets slots on behalf of **make-instances-obsolete** by means of **shared-initialize**.

(<sup>F</sup>**allocate-instance** *class* {*:initarg value*}\* *other-keyarg*\*)  
▷ Return uninitialized instance of *class*. Called by **make-instance**.

(<sup>F</sup>**shared-initialize** *instance*  $\left\{ \begin{array}{l} \text{slots} \\ \text{T} \end{array} \right\}$  {*:initarg value*}\* *other-keyarg*\*)  
▷ Fill *instance*'s *slots* using *initargs* and **:initform** forms.

(<sup>F</sup>**slot-missing** *class object slot*  $\left\{ \begin{array}{l} \text{setf} \\ \text{slot-boundp} \\ \text{slot-makunbound} \\ \text{slot-value} \end{array} \right\}$  [*value*])  
▷ Called in case of attempted access to missing *slot*. Its primary method signals **error**.

(<sup>M</sup>**with-condition-restarts** *condition restarts form*<sup>P</sup>\*)  
▷ Evaluate *forms* with *restarts* dynamically associated with *condition*. Return values of forms.

(<sup>Fu</sup>**arithmetic-error-operation** *condition*)  
(<sup>Fu</sup>**arithmetic-error-operands** *condition*)  
▷ List of function or of its operands respectively, used in the operation which caused *condition*.

(<sup>Fu</sup>**cell-error-name** *condition*)  
▷ Name of cell which caused *condition*.

(<sup>Fu</sup>**unbound-slot-instance** *condition*)  
▷ Instance with unbound slot which caused *condition*.

(<sup>Fu</sup>**print-not-readable-object** *condition*)  
▷ The object not readably printable under *condition*.

(<sup>Fu</sup>**package-error-package** *condition*)  
(<sup>Fu</sup>**file-error-pathname** *condition*)  
(<sup>Fu</sup>**stream-error-stream** *condition*)  
▷ Package, path, or stream, respectively, which caused the *condition* of indicated type.

(<sup>Fu</sup>**type-error-datum** *condition*)  
(<sup>Fu</sup>**type-error-expected-type** *condition*)  
▷ Object which caused *condition* of type **type-error**, or its expected type, respectively.

(<sup>Fu</sup>**simple-condition-format-control** *condition*)  
(<sup>Fu</sup>**simple-condition-format-arguments** *condition*)  
▷ Return format control or list of format arguments, respectively, of *condition*.

<sup>var</sup>**\*break-on-signals\***<sub>NIL</sub>  
▷ Condition type debugger is to be invoked on.

<sup>var</sup>**\*debugger-hook\***<sub>NIL</sub>  
▷ Function of condition and function itself. Called before debugger.

## 12 Types and Classes

For any class, there is always a corresponding type of the same name.

(<sup>Fu</sup>**typep** *foo type* [*environment*]<sub>NIL</sub>) ▷ T if *foo* is of *type*.

(<sup>Fu</sup>**subtypep** *type-a type-b* [*environment*])  
▷ Return T if *type-a* is a recognizable subtype of *type-b*, and NIL if the relationship could not be determined.

(<sup>So</sup>**the** *type form*) ▷ Declare values of form to be of *type*.

(<sup>Fu</sup>**coerce** *object type*) ▷ Coerce *object* into *type*.

(<sup>M</sup>**typecase** *foo* (*type a-form*<sup>P</sup>\*) [ $\left( \begin{array}{l} \text{otherwise} \\ \text{T} \end{array} \right) \text{b-form}$ ]<sub>NIL</sub><sup>P</sup>\*)]  
▷ Return values of the a-forms whose *type* is *foo* of. Return values of *b-forms* if no *type* matches.

$\left( \begin{array}{l} \text{ctypcase} \\ \text{etypcase} \end{array} \right) \text{foo } (\widehat{\text{type form}}^*_{\text{P}})^*$   
▷ Return values of the forms whose *type* is *foo* of. Signal correctable/non-correctable error, respectively if no *type* matches.

(<sup>Fu</sup>**type-of** *foo*) ▷ Type of *foo*.

(<sup>M</sup>**check-type** *place type* [*string*  $\left\{ \begin{array}{l} \text{a} \\ \text{an} \end{array} \right\} \text{type}$ ])  
▷ Signal correctable **type-error** if *place* is not of *type*. Return NIL.

(<sup>Fu</sup>**stream-element-type** *stream*) ▷ Return type of *stream* objects.

(<sup>Fu</sup>**array-element-type** *array*) ▷ Element type *array* can hold.

(<sup>M</sup>assert test [(place\*) [condition continue-arg\*  
type {[:initarg-name value]\*}]])

▷ If *test*, which may depend on *places*, returns *NIL*, signal as correctable **error** *condition* or a new condition of *type* or, with <sup>Fu</sup>format *control* and *args* (see p. 36), **error**. When using the debugger's continue option, *places* can be altered before re-evaluation of *test*. Return *NIL*.

(<sup>M</sup>handler-case foo (type ([var]) (declare decl\*)\* condition-form<sup>P\*</sup>\*)  
[:no-error (ord-λ\*) (declare decl\*)\* form<sup>P\*</sup>])

▷ If, on evaluation of *foo*, a condition of *type* is signalled, evaluate matching *condition-forms* with *var* bound to the condition, and return their values. Without a condition, bind *ord-λs* to values of *foo* and return values of forms or, without a **:no-error** clause, return values of *foo*. See p. 16 for (ord-λ\*).

(<sup>M</sup>handler-bind ((condition-type handler-function)\* form<sup>P\*</sup>\*)

▷ Return values of forms after evaluating them with *condition-types* dynamically bound to their respective *handler-functions* of argument condition.

(<sup>M</sup>with-simple-restart (restart  
NIL) control arg\*) form<sup>P\*</sup>\*)

▷ Return values of forms unless *restart* is called during their evaluation. In this case, describe restart using <sup>Fu</sup>format *control* and *args* (see p. 36) and return *NIL* and *T*.

(<sup>M</sup>restart-case form (foo (ord-λ\*))  
[:interactive arg-function]  
[:report {report-function  
string<sup>"foo"</sup>}]  
[:test test-function<sup>T</sup>]

(declare decl\*)\* restart-form<sup>P\*</sup>\*)  
▷ Evaluate *form* with dynamically established restarts *foo*. Return values of form or, if by (<sup>Fu</sup>invoke-restart foo arg\*) one restart *foo* is called, use *string* or *report-function* (of a stream) to print a description of restart *foo* and return the values of its *restart-forms*. *arg-function* supplies appropriate *args* if *foo* is called by **invoke-restart-interactively**. If (*test-function condition*) returns *T*, *foo* is made visible under *condition*. *arg\** matches (ord-λ\*); see p. 16 for the latter.

(<sup>M</sup>restart-bind ((restart  
NIL) restart-function

{[:interactive-function function]  
[:report-function function]  
[:test-function function]})\*) form<sup>P\*</sup>\*)

▷ Return values of forms evaluated with *restarts* dynamically bound to *restart-functions*.

(<sup>Fu</sup>invoke-restart restart arg\*)

(<sup>Fu</sup>invoke-restart-interactively restart)

▷ Call function associated with *restart* with arguments given or prompted for, respectively. If *restart* function returns, return its values.

(<sup>Fu</sup>compute-restarts  
<sup>Fu</sup>find-restart name) [condition])

▷ Return list of all restarts, or innermost restart *name*, respectively, out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. Return *NIL* if search is unsuccessful.

(<sup>Fu</sup>restart-name restart) ▷ Name of restart.

(<sup>Fu</sup>abort  
<sup>Fu</sup>muffle-warning  
<sup>Fu</sup>continue  
<sup>Fu</sup>store-value value  
<sup>Fu</sup>use-value value) [condition<sup>T</sup>])

▷ Transfer control to innermost applicable restart with same name (i.e. **abort**, ..., **continue** ...) out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. If no restart is found, signal **control-error** for **abort** and **muffle-warning**, or return *NIL* for the rest.

(<sup>EF</sup>slot-unbound class instance slot)

▷ Called by <sup>Fu</sup>slot-value in case of unbound *slot*. Its primary method signals **unbound-slot**.

## 10.2 Generic Functions

(<sup>Fu</sup>next-method-p)

▷ *T* if enclosing method has a next method.

(<sup>M</sup>defgeneric {foo  
(setf foo)} (required-var\* [&optional {var  
(var)}]\*

[&rest var] [&key {var  
(var|(:key var))}\*]

[&allow-other-keys])

{[:argument-precedence-order required-var+]  
[:declare (optimize arg\*)+]  
[:documentation string]  
[:generic-function-class class standard-generic-function]  
[:method-class class standard-method]  
[:method-combination c-type standard c-arg\*]  
[:method defmethod-args]\*}

▷ Define generic function *foo*. *defmethod-args* resemble those of **defmethod**. For *c-type* see section 10.3.

(<sup>Fu</sup>ensure-generic-function {foo  
(setf foo)})

{[:argument-precedence-order required-var+]  
[:declare (optimize arg\*)+]  
[:documentation string]  
[:generic-function-class class]  
[:method-class class]  
[:method-combination c-type c-arg\*]  
[:lambda-list lambda-list]  
[:environment environment]}

▷ Define or modify generic function *foo*. **:generic-function-class** and **:lambda-list** have to be compatible with a pre-existing generic function or with existing methods, respectively. Changes to **:method-class** do not propagate to existing methods. For *c-type* see section 10.3.

(<sup>M</sup>defmethod {foo  
(setf foo)} [{:before  
:after  
:around primary method]  
qualifier\*]

{var  
(spec-var {class  
(eql bar)})}\* [&optional

{var  
(var [init [supplied-p]])}\* [&rest var] [&key

{var  
(var  
(:key var)) [init [supplied-p]])}\* [&allow-other-keys]

[&aux {var  
(var [init])}\*] {[:declare decl\*)\*} form<sup>P\*</sup>\*)

▷ Define new method for generic function *foo*. *spec-vars* specialize to either being of *class* or being **eql bar**, respectively. On invocation, *vars* and *spec-vars* of the new method act like parameters of a function with body *form\**. *forms* are enclosed in an implicit **block foo**. Applicable *qualifiers* depend on the **method-combination** type; see section 10.3.

(<sup>EF</sup>add-method  
<sup>EF</sup>remove-method) generic-function method)

▷ Add (if necessary) or remove (if any) *method* to/from generic-function.

(<sup>EF</sup>find-method generic-function qualifiers specializers [error<sup>T</sup>])

▷ Return suitable method, or signal **error**.

(<sup>EF</sup>compute-applicable-methods generic-function args)

▷ List of methods suitable for *args*, most specific first.

$$(\overset{\text{Fu}}{\text{call-next-method}} \ arg^* \boxed{\text{current args}})$$

▷ From within a method, call next method with *args*; return its values.

(<sup>gF</sup>no-applicable-method *generic-function arg\**)

▷ Called on invocation of *generic-function* on *args* if there is no applicable method. Default method signals **error**.

$$\left( \begin{matrix} \text{Fu} \\ \text{invalid-method-error } method \\ \text{Fu} \\ \text{method-combination-error} \end{matrix} \right) \text{ control } arg^*)$$

▷ Signal **error** on applicable method with invalid qualifiers, or on method combination. For *control* and *args* see **format**, p. 36.

(<sup>gF</sup>**no-next-method** *generic-function method arg\**)

▷ Called on invocation of **call-next-method** when there is no next method. Default method signals **error**.

(<sup>gF</sup>function-keywords *method*)

▷ Return list of keyword parameters of *method* and  $\mathbb{T}$  if other keys are allowed.

(<sup>gf</sup>**method-qualifiers** *method*)    ▷ List of qualifiers of *method*.

### 10.3 Method Combination Types

**standard**

▷ Evaluate most specific **:around** method supplying the values of the generic function. From within this method, **call-next-method**<sub>Fu</sub> can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, call all **:before** methods, most specific first, and the most specific primary method which supplies the values of the calling **call-next-method** if any, or of the generic function; and which can call less specific primary methods via **call-next-method**<sub>Fu</sub>. After its return, call all **:after** methods, least specific first.

and|or|append|list|nconc|progn|max|min|+

▷ Simple built-in **method-combination** types; have the same usage as the *c-types* defined by the short form of **define-method-combination**.

(<sup>M</sup>define-method-combination *c-type*

$$\left\{ \begin{array}{l} \text{:documentation } \overbrace{\text{string}} \\ \text{:identity-with-one-argument } \text{bool} \boxed{\text{NIL}} \\ \text{:operator } \text{operator} \boxed{\text{c-type}} \end{array} \right\}$$

▷ **Short Form.** Define new **method-combination** *c-type*. In a generic function using *c-type*, evaluate most specific **:around** method supplying the values of the generic function. From within this method, **call-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, return from the calling **call-next-method** or from the generic function, respectively, the values of (*operator (primary-method gen-arg\*)*), *gen-arg\** being the arguments of the generic function. The *primary-methods* are ordered [ **{most-specific-first** **{most-specific-last** ] (specified as *c-arg* in **defgeneric**). Using *c-type* as the *qualifier* in **defmethod** makes the method primary.

$$(\text{define-method-combination } c\text{-type } (ord-\lambda^*) ((group$$
$$\left\{ \begin{array}{l} * \\ (qualifier^* [*]) \\ predicate \end{array} \right\}$$

$$\left\{ \begin{array}{l} :description \textit{ control} \\ :order \left\{ \begin{array}{l} :most-specific-first \\ :most-specific-last \end{array} \right\} \boxed{most-specific-first} \end{array} \right\} *)$$

$$:required \textit{ bool}$$

$$\left\{ \begin{array}{l} (:arguments \textit{ method-combination-}\lambda^*) \\ (:generic-function \textit{ symbol}) \\ (declare \textit{ decl}^*)^* \end{array} \right\} \textit{ body}^P_*$$

$$\widehat{doc}$$

▷ **Long Form.** Define new **method-combination** *c-type*. A call to a generic function using *c-type* will be equivalent to a call to the forms returned by *body\** with *ord-λ\** bound to *c-arg\** (cf. **defgeneric**<sup>M</sup>), with *symbol* bound to the generic function, with *method-combination-λ\** bound to the arguments of the generic function, and with *groups* bound to lists of methods. An applicable method becomes a member of the leftmost *group* whose *predicate* or *qualifiers* match. Methods can be called via **call-method**<sup>M</sup>. Lambda lists (*ord-λ\**) and (*method-combination-λ\**) according to *ord-λ* on p. 16, the latter enhanced by an optional **&whole** argument.

$$(\text{call-method}^{\text{M}} \left\{ \widehat{\text{method}}_{(\text{make-method}^{\text{M}} \widehat{\text{form}})} \right\} [ ( \left\{ \widehat{\text{next-method}}_{(\text{make-method}^{\text{M}} \widehat{\text{form}})} \right\}^* ) ] )$$

▷ From within an effective method form, call *method* with the arguments of the generic function and with information about its *next-methods*; return its values.

## 11 Conditions and Errors

For standardized condition types cf. Figure 2 on page 30.

$$(\text{define-condition } foo \text{ (parent-type}^* \boxed{\text{condition}})$$
$$\left\{ \begin{array}{l} \text{slot} \\ \left\{ \begin{array}{l} \text{:reader } \textit{reader} \}^* \\ \text{:writer } \left\{ \textit{writer} \right. \\ \quad \left. \text{:setf } \textit{writer} \} \}^* \\ \text{:accessor } \textit{accessor} \}^* \\ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \text{:class} \end{array} \right. \left\{ \textit{instance} \right\} \\ \text{:initarg } \textit{initarg-name} \}^* \\ \text{:initform } \textit{form} \\ \text{:type } \textit{type} \\ \text{:documentation } \textit{slot-doc} \end{array} \right\} \end{array} \right\}^*$$

▷ Define, as a subtype of *parent-types*, condition type *foo*. In a new condition, a *slot*'s value defaults to *form* unless set via *:initarg-name*; it is readable via (*reader i*) or (*accessor i*), and writable via (*writer i value*) or (**self** (*accessor i value*)). With **:allocation :class**, *slot* is shared by all conditions of type *foo*. A condition is reported by *string* or by *report-function* of arguments condition and stream.

(<sup>Fu</sup>**make-condition** *type* {*:initarg-name value*}\*)

▷ Return new condition of *type*.

$$\left( \begin{array}{c} \text{Fu} \\ \text{signal} \\ \text{Fu} \\ \text{warn} \\ \text{Fu} \\ \text{error} \end{array} \right) \left\{ \begin{array}{l} \text{condition} \\ \text{type } \{:\text{initarg-name value}\}^* \\ \text{control arg}^* \end{array} \right\}$$

► Unless handled, signal as **condition**, **warning** or **error**, respectively, *condition* or a new condition of *type* or, with **format** *control* and *args* (see p. 36), **simple-condition**, **simple-warning**, or **simple-error**, respectively. From **signal** <sup>Fu</sup> and **warn**, return NIL.

$$(\text{Fu } \text{cerror } \text{continue-control } \left\{ \begin{array}{l} \text{condition } \text{continue-arg}^* \\ \text{type } \{ \text{:initarg-name value} \}^* \\ \text{control } \text{arg}^* \end{array} \right\})$$

▷ Unless handled, signal as correctable **error** *condition* or a new condition of *type* or, with **format** *control* and *args* (see p. 36), **simple-error**. In the debugger, use **format** arguments *continue-control* and *continue-args* to tag the continue option. Return NIL.

$$(\text{ignore-errors } form^{P_*})^M$$

▷ Return values of forms or, in case of **errors**, NIL and the condition.

$$(\text{invoke-debugger}^{\text{Fu}} \text{ condition})$$

- ▷ Invoke debugger with *condition*.
